This very provocative book takes the reader on a “think-out-of-the-box” journey through the development of a treatment regimen for multiple myeloma called “dtZ”. It is a firsthand account of how more than 50 patients with myeloma were given a non-toxic, precisely-targeted, anti-cancer treatment that was specifically adapted to their individual cancers. These Individualized Anti-Cancer Targeted Therapies (smart bombs) have produced amongst the best responses

as well as survival rates for myeloma. Accordingly, the author argues that some patients might even have been “cured” of their cancers. The concepts and logic behind “dtZ” are carefully presented in simple language so that both doctors and patients can easily understand them. Numerous tables and figures are provided, together with clear and simple explanations. This book is a valuable resource for all patients with myeloma who want to get the most out of their treatment by individualizing treatment to suit their needs, particularly for patients who have just been diagnosed with myeloma and who are taking that very important first step in their treatment. It is also a useful guide for doctors, nurses and researchers who treat and/or

study myeloma.

Since the large-scale manufacture of

personal timepieces began, industry leadership has shifted among widely disparate locations, production systems, and cultures. This book recounts the story of the quest for supremacy in the manufacture of watches--from the cottage industries of Britain; to the preeminence of Switzerland and, later, the United States; to the high-tech plants of Japan and the sweatshops of Hong Kong. Glasmeier examines both the strategies adopted by specific firms and the interplay of such varying influences as technological change, cyclical economic downturns, war, and national trade policies. In so doing, she delineates a cohesive framework within which to address such broader questions as how sustained regional economic development takes place (or starts and then stops); how decisions made by corporations are structured by internal and external forces; and

the ways industrial cultures with different strategic learning capabilities facilitate or thwart the pursuit of technological change.

The history of recruiting citizens to spy on each other in

the United States. Ever since the revelations of whistleblower Edward Snowden, we think about surveillance as the data-tracking digital technologies used by the likes of Google, the National Security Administration, and the military. But in reality, the state and allied institutions have a much longer history of using everyday citizens to spy and inform on their peers. Citizen Spies shows how “If You See Something, Say Something” is more than just a new homeland security program; it has been an essential civic responsibility throughout the history of the United States. From the town crier of Colonial America to the recruitment of youth through “junior police,” to the rise of Neighborhood Watch, AMBER Alerts, and Emergency 9-1-1, Joshua Reeves explores how ordinary citizens have been taught to carry out surveillance on their peers. Emphasizing the role humans play as

“seeing” and “saying” subjects, he demonstrates how American society has continuously fostered cultures of vigilance, suspicion, meddling, snooping, and snitching. Tracing the evolution of police crowd-sourcing from “Hue and Cry” posters and America’s Most Wanted to police-affiliated social media, as well as the U.S.’s recurrent anxieties about political dissidents and ethnic minorities from the Red Scare to the War on Terror, Reeves teases out how vigilance toward neighbors has long been aligned with American ideals of patriotic and moral duty. Taking the long view of the history of the citizen spy, this book offers a much-needed perspective for those interested in how we arrived at our current moment in surveillance culture and contextualizes contemporary trends in policing. By reviewing the initial vision of Digital Earth, the evolution of that vision, the relevant key technologies, and the role of Digital Earth in helping people respond to global challenges, this publication reveals how

and why Digital Earth is becoming vital for acquiring, processing, analysing and mining the rapidly growing volume of global data sets about the Earth. The main aspects of Digital Earth covered here include: Digital Earth platforms, remote sensing and navigation satellites, processing and visualizing geospatial information, geospatial information infrastructures, big data and cloud computing, transformation and zooming, artificial intelligence, Internet of Things, and social media. Moreover, the book covers in detail the multi-layered/multi-faceted roles of Digital Earth in response to sustainable development goals, climate changes, and mitigating disasters, the applications of Digital Earth (such as digital city and digital heritage), the citizen science in support of Digital Earth, the economic value of Digital Earth, and so on. This book also reviews the regional and national development of Digital Earth around the world, and discusses the role and effect of education and ethics. Lastly, it concludes with a summary of the challenges and forecasts

the future trends of Digital Earth. By sharing case studies and a broad range of general and scientific insights into the science and technology of Digital Earth, this book offers an essential introduction for an ever-growing international audience.
