Since the historic Nuremberg Trial of 1945 an international customary law principle has developed that commission of a core crime under international law – war crimes, genocide, crimes against humanity and aggression – should not go unpunished. History shows, that when in Africa such violations occurred, especially as a result of election disputes, national and regional actors, including the African Union, resorted to political rather than legal responses. However, when crimes against humanity were alleged to have been committed in Kenya during the 2007-2008 post-election violence, a promising road map for criminal accountability was agreed upon alongside a political solution. In the spirit of this road map, the author analyzes the post-election violence in Kenya from a legal point of view. He extensively examines legal options for domestic criminal accountability and discusses both retributive (prosecutions) and restorative justice (mainly truth commission) mechanisms, being the main legal responses to the gross violations of human rights. Furthermore, he thoroughly investigates the Kenya situation before the ICC and the legal-cum-political responses to the ICC intervention in Kenya. Practitioners and academics in the field of international criminal law and related disciplines, as well as political sciences and (legal) history will find in this book highly relevant information about alternative legal approaches of the fight against and punishment of crimes against humanity, as defined under the ICC Statute.

Recently, a new digital twin consortium has been established that aims to deploy digital twin technology in new markets as well as in the development of smart cities. Designing smart cities, smart communities, and smart ecosystems powered by optimal digital twin deployments is a vision that currently only futurists can entertain and requires some time to reach large-scale adoption. However, it is incumbent upon us as a society to educate and train future generations on how to leverage digital twin technologies in order to optimize our daily lives as well as increase our efficiency, productivity, and safety. Impact of Digital Twins in Smart Cities Development provides insights regarding the global landscape for current digital twin research and deployments and highlights some of the challenges and opportunities faced during large-scale adoptions. Critical domains such as ethics, data governance, cybersecurity, inclusion, diversity, and sustainability are also addressed and considered. Covering topics such as digital identity and digital economics, this reference work is ideal for urban planners,

engineers, policymakers, industry leaders, scientists, economists, academicians, practitioners, researchers, instructors, and students.

Redrawing district lines is arguably the most polarizing of political activities in the United States today. As technological developments permit more and more sophisticated statistical analyses, those in charge of the process are more tempted to gerrymander districts for their own future benefit. At the same time, as this data is made available to the public, litigation and calls for transparency intensify. As a bellwether state, Florida offers a unique and fascinating case study to examine the various effects of redistricting. The contributors to this volume examine the issue from the perspectives of both politicians and voters, exploring the process of redistricting as well as the homogenization of districts. They examine new and ongoing controversies, including the creation of disparate pockets of opponents' voting blocs, by focusing on the massive 2012 boundary changes throughout the state--and the judicial review that called into question their legality on the eve of the 2014 elections.

After nearly six centuries of emergence and world dominance, the sovereign state now has a globally widespread competitor that frequently manages to surpass its capabilities in the areas of wealth, security, and self-determination. This book will show that in region after region throughout the world partially independent territories (including Hong Kong, Cayman Islands, Kurdistan, New Caledonia, and others) tend to be wealthier and more secure than their sovereign state counterparts. Often ignored because of their small size, lack of militaries, and divided powers, the partially independent territories that produce these advantages are responsible for nearly one-fifth of global capital flows, serve as solutions for some of the world's most intractable nationalistic disputes, and furnish important capabilities for sovereign states. The existence and capabilities of these polities contradict widely held assumptions of sovereign state pre-eminence and give rise to a range of puzzling issues that will be addressed by this book. Why do local nationalistically distinct populations accept partially independent unions? What guarantees do these polities have that their powers will not be usurped by internal and external adversaries? What makes core states (which divide and share powers with partially independent territories) willing to part with some of their sovereignty amidst fears that their countries will fully fragment? What are the prospects for the independence of Scotland, Catalonia, Puerto Rico, and the nearly 50 partially independent territories around the globe? This book explains how these polities emerge, maintain themselves, and sometimes come to an end.

A consistent and compelling narrative is crucial to student engagement with any book. But sadly, so many brief editions are mere cut-and-paste versions of their comprehensive selves. Stephanie McClure and Cherise A. Harris's *Second Thoughts on Race in the United States: Hoodies, Model Minorities, and Real Americans* is an edited collection of short essays that address the most common misconceptions about race held by students (and by many in the United States, in general)—it is a "one-stop shopping" reader on the racial topics most often pondered by students and derived from their interests and concerns. There is no existing reader that summarizes the research across a range of topics in a consistent, easily accessible format and considers the evidence against particular racial

myths in the language that students themselves use.

While teaching at an all-black middle school in Atlanta, Meira Levinson realized that students' individual self-improvement would not necessarily enable them to overcome their profound marginalization within American society. This is because of a civic empowerment gap that is as shameful and antidemocratic as the academic achievement gap targeted by No Child Left Behind. No Citizen Left Behind argues that students must be taught how to upend and reshape power relationships directly, through political and civic action. Drawing on political theory, empirical research, and her own on-the-ground experience, Levinson shows how de facto segregated urban schools can and must be at the center of this struggle. Recovering the civic purposes of public schools will take more than tweaking the curriculum. Levinson calls on schools to remake civic education. Schools should teach collective action, openly discuss the racialized dimensions of citizenship, and provoke students by engaging their passions against contemporary injustices. Students must also have frequent opportunities to take civic and political action, including within the school itself. To build a truly egalitarian society, we must reject myths of civic sameness and empower all young people to raise their diverse voices. Levinson's account challenges not just educators but all who care about justice, diversity, or democracy.

As the civic engagement gap widens across lines of race, class, and ethnicity, educators in today's urban schools must reconsider what it means to teach for citizenship; however, few resources exist that speak to their unique contexts. Teaching for Citizenship in Urban Schools offers lessons and strategies that combines the power of inquiry-driven teaching with a funds of knowledge approach to capitalize on the lived civic experiences of urban youth and children. Teaching for Citizenship in Urban

Schools presents six strategies for making civic and social studies education relevant and engaging: using photovoice for social change, conducting culturally responsive investigations of community, defining American Black founders, enacting hip-hop pedagogy, employing equity literacy to explore immigrant enclaves, and drawing on young adult fiction to teach about police violence. Written by some of the leading scholars in the field, each chapter includes an overview of the strategy and lessons for both elementary and secondary students. How social media and DIY communities have enabled new forms of political participation that emphasize doing and making rather than passive consumption. Today, DIY—do-it-yourself—describes more than self-taught carpentry. Social media enables DIY citizens to organize and protest in new ways (as in Egypt's "Twitter revolution" of 2011) and to repurpose corporate content (or create new user-generated content) in order to offer political counternarratives. This book examines the usefulness and limits of DIY citizenship, exploring the diverse forms of political participation and "critical making" that have emerged in recent years. The authors and artists in this collection describe DIY citizens whose activities range from activist fan blogging and video production to knitting and the creation of community gardens. Contributors examine DIY activism, describing new modes of civic engagement that include Harry Potter fan activism and the activities of the Yes Men. They consider DIY making in learning, culture, hacking, and the arts, including do-it-yourself media production and collaborative documentary making. They discuss DIY and design and how citizens can unlock the black box of technological infrastructures to engage and innovate open and participatory critical making. And they explore DIY and media, describing activists' efforts to remake and reimagine media and the public sphere. As these chapters make clear, DIY is characterized by its emphasis on "doing" and making rather than passive consumption. DIY citizens assume active roles as interventionists, makers, hackers, modders, and tinkerers, in pursuit of new forms of engaged and participatory democracy. ### The Post-Election Violence in Kenya CQ Press

This volume explores the concept of 'citizenship', and argues that it should be understood both as a process of becoming and the ability to participate fully, rather than as a status that can be inherited, acquired, or achieved. From a courtroom in Bulawayo to a nursery in Birmingham, the authors use local contexts to foreground how the vulnerable, particularly those from minority language backgrounds, continue to be excluded, whilst offering a powerful demonstration of the potential for change offered by individual agency, resistance and struggle. In addressing questions such as 'under what local conditions does "dis-citizenship" happen?'; 'what role do language policies and pedagogic practices play?' and 'what kinds of margins and borders keep humans from fully participating'? The chapters in this volume shift the debate away from visas and passports to more uncertain and contested spaces of interpretation.
