American Boy Oxford University Press, USA

This book tells you why and how. This book brings together a collection of popular articles previously published by the author in assorted car magazines. Based on in-depth research carried out at Manchester University, the articles investigate how classic engines respond to modern petrol/gasoline, and the results are presented in a way that any enthusiast can understand. One chapter ranks some brands and grades of modern

petrol/gasoline, helping you choose the best type for your vehicle, while other chapters present the findings that debunk some of the myths about petrol/gasoline and engines. Real data is provided to help you tune your classic vehicle, ensuring that it runs as it should, allowing you to experience the pleasure of driving your classic car instead of worrying about it breaking down. The appendix gives a down-to-earth description of how to rebuild and tune SU and similar carburettors. Paul Ireland 's years of experience and no-

nonsense scientific approach will help you get the best from your classic car.

The automotive industry currently faces huge challenges. The fundamental technological paradigm it relies on, volume production, has become progressively more unprofitable in the face of increasingly segmented niche markets. At the same time it faces increasing regulatory and social pressures

to improve both the sustainability of its products and methods of production. Building on a wealth of research, The automotive industry and the environment addresses those challenges and how they can be met in producing a sustainable and profitable industry for the future. The authors first discuss the development of the automotive industry and the problems it currently faces. They then consider the solutions the industry can adopt. The book reviews trends in more environmentally-friendly technologies such as the use of more sustainable fuel sources and new types of modular design with built-in recyclability. However, these technologies can only be fully exploited if methods of manufacture change. The book also describes models of decentralised production, particularly the micro factory retailing (MFR) model, which provide an alternative to volume production and promise to be both more sustainable and more profitable. The automotive industry and the environment provides both a cogent diagnosis of the environmental and other problems facing the industry and a blueprint for a better future. It will be widely welcomed by the

---

industry, policy makers and all those concerned with sustainable transport. Addresses the challenges facing the automotive industry, from the increasing unprofitability of volume production to regulatory and social pressures to improve environmental and product sustainability Examines how the automotive industry can meet the current challenges in producing a sustainable and profitable industry for the future Reviews trends in more environmentally-friendly technologies such as the use of more sustainable fuel sources and new types of modular design

Central Otago is a region with extreme climatic conditions: and within the region itself climate statistics reveal differing rainfall, temperatures, and soil quality. This book gives practical advice on which trees, shrubs and perennials may be grown successfully in Central Otago and the Lakes District. The region is booming: people are moving to Central Otago in droves from all over New Zealand.

And they are planting gardens with all their favourite trees and shrubs only to find, after a dry autumn and harsh winter, that many plants have died. This guide is a showcase of plants which will thrive in this most beautiful and challenging area. Ralph Markby's horticultural experience has been gained over the past 40 years. He covers essential information on climate, average temperatures, average rates of rainfall, soil variations, and includes a list of 'favourite plants' which have

---

been grown successfully in the region. After a short introduction to garden development where the author advises on planting a lawn, growing shelter from sun and wind, pruning, irrigation, compost and more, he moves on to his lists of suitable plants. This includes a section on trees for the smaller property, and trees for larger areas, a section on conifers, deciduous trees, shrubs, perennials, ground cover, climbers, roses, rock gardens and finally, a plant sourcing guide. There is also

an extensive plant index. The friendship, laughter, and book is illustrated throughout in colour with stunning photos from the author's own collection.

When her conventional life fell apart, Jacqui Furneaux responded in a way that surprised many. Her random global wanderings for seven years stride an apparently obsolete motorcycle brought beauty,

romance on the road; when she wasn't fending off amorous sea-dogs or facing some other adversity with quiet courage.

The use of lubricants began in ancient times and has developed into a major international business through the need to lubricate machines of increasing

complexity. The impetus for lubricant development has arisen from need, so lubricating practice has preceded an understanding of the scientific principles. This is not surprising as the scientific basis of the technology is, by nature, highly complex and interdisciplinary. However, we believe that the understanding of lubricant phenomena will continue to be developed at a molecular level to meet future challenges. These

challenges will include the control of emissions from internal combustion engines, the reduction of friction and wear in and continuing improvements to lubricant performance and machinery, life-time. More recently, there has been an increased understanding of the chemical aspects of lubrication, which has complemented the knowledge and understanding gained through studies dealing with physics and

---

engineering. This book aims to bring together this chemical information and present it in a practical way. It is written by chemists who are authorities in the various specialisations within the lubricating industry, and is intended to be of interest to chemists who may already be working in the lubricating industry or in academia, and who are seeking a chemist's view of lubrication. It will also be of benefit to engineers and technologists familiar

with the industry who require a more fundamental understanding of lubricants.

Major Skaarup's descriptions of Canadian armour as it evolved to the level it has today reveals that military planners have had to be continuously creative in adapting to the changes in modern combat. They had to devise many intricate techniques, tactics and procedures to overcome the insurgents and opposition forces faced in Afghanistan and future overseas

missions where Canadian armour will be brought into play. This guide book will show the interested reader where to find examples of the historical armour preserved in Canada, and perhaps serve as a window on how Canadas military contribution to safety and security in the world has evolved.

Corvettes built from 1968 through 1982 are somewhat unique collector cars for two reasons: 1) They can be purchased at relatively reasonable prices and 2) Their owners tend to be less

---

concerned about absolute authenticity than other car collectors. This interchange manual advises owners of Corvettes from these model years as to which parts can be swapped across model years, as well as which parts from other Chevrolets can be used in their cars. An ideal, all-inclusive reference for owners who want to modify their cars at a nominal cost while expanding their modification options.
