Introduction to Mechatronic Design is ideal for upper level and graduate Mechatronics courses in Electrical, Computing, or Mechanical & Aerospace Engineering. Unlike other texts on mechatronics that focus on derivations and calculations, Introduction to Mechatronics, 1e, takes a narrative approach, emphasizing the importance of building intuition and understanding before diving into the math. The authors believe that integration is the core of mechatronics and students must have a command of each of the domains to create the balance necessary for successful mechatronic design and devote sections of the book to each area, including mechanical, electrical, and software disciplines, as well as a section on system design and engineering. A robust package of teaching and learning resources accompanies the book.

Rats Saw God Candlewick Press (MA)

Originally published in 1936, in this classic account of the development of abstract art Alfred Barr analyses the many diverse abstract movements which emerged with bewildering rapidity in the early years of the twentieth century, and which had an impact on every major form of art. Barr traces the history of nonrepresentational art from its antecedents in late nineteenth-century painting in France - Seurat and Neo-Impressionism, Gauguin and Synthetism, and Cézanne - through abstract tendencies in Dada and Surrealism. He distinguishes two main trends in abstract art: the geometrical, structural current as it developed in Cubism and later in Constructivism and Mondrian, and the intuitional, decorative current running from Matisse and Fauvism through Kandinsky and, later, Surrealism. He shows how individual movements influenced one another, and how many artists experimented with more than one style. Barr also discusses the involvement of a number of abstract movements in architecture and the practical arts - the Bauhaus in Germany, de Stijl in Holland, Purism in France, and Suprematism and Constructivism in Russia.
