The Fierce 44 Cengage Learning Music and dyslexia is of particular interest for two reasons. Firstly, research suggests that music education can benefit young dyslexics as it helps them focus on auditory and motor timing skills and highlights the rhythms of language. Secondly, dyslexic musicians at a more advanced level face particular challenges such as sight-reading, written requirements of music examinations and extreme

performance nerves. This is a sequel to the highly successful Music and Dyslexia: Opening New Doors, published in 2001. The field of dyslexia has developed rapidly, particularly in the area of neuropsychology. Therefore this book focuses on these research advances, and draws out the aspects of music education that benefit young dyslexics. The contributors also discuss the problems that dyslexic musicians face, and several chapters are devoted to sight-reading and specific strategies that dyslexics can use to help them sight-read. The book offers practical techniques and strategies, to teachers and parents to help them work with young dyslexics and dyslexic musicians.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968.

Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series).

As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
