Despite his accidental death in June 1942 at the age of 38, Alan Dower Blumlein was unquestionably one of the century's most creative engineers and filed some 140 patents. He was the driving force and inspiration behind a vast number of fundamental innovations in the fields of radar, electronics and sound recording, amongst which he held perhaps the landmark patent enabling stereo sound. Surprisingly, until 1999 there had been no biographies of this remarkable man. The IEE is proud to rectify this by publication of this scholarly treatment of Blumlein's life, which includes a foreword by his eldest son.

This approach enables students to develop a sound understanding of engineering principles and their use in practice. These theoretical concepts are supported by 320 fully worked problems, nearly 600 further problems with answers, and 276 multiple-choice questions giving the reader a firm grounding on each topic. The new edition is up to date with the latest BTEC National specifications and can also be used on undergraduate courses in mechanical, civil, structural, aeronautical and marine engineering, together with naval architecture. A chapter has been added at the beginning on revisionary mathematics since progress in engineering studies is not possible without some basic mathematics knowledge. Minor modifications and some further worked problems have also been added throughout the text. Colour layout helps navigation and highlights key points Student-friendly approach with numerous worked problems, multiple-choice and short-answer questions, exercises, revision tests and nearly 400 diagrams Supported with free online material for students and lecturers Readers will also be able to access the free companion website at:

Youth unemployment and joblessness are major issues for national governments and international organizations across the globe. In this respect, the school-to-work transition challenge is increasingly raising the interest of companies, education and training institutions, families and young people themselves, who are often involved in precarious and illegal forms of employment, in many countries of the world. In the field of industrial and labour relations, the school-to-work perspective seems particularly suitable for policy formulation and assessment: the broad and complex range of tools, strategies and policies for enabling youth training and their access to the labour market is deserving of a closer analysis at an international level in a time when jobless recovery threatens national economies. The ADAPT LABOUR STUDIES BOOK-SERIES has in connection been set up with a view to achieving a better understanding of the causes, consequences and possible responses to the issue in a global dimension through an interdisciplinary and comparative approach.
