book is flipped over, the other half provides the garden city solutions. Packed with photographs, diagrams, and colourful infographics, *Garden City Mega City* presents a compelling case for re-examining and re-planning the mega cities of the 21st century.

Bench and Bar Routledge

Many technical obstacles to effective innovation no longer exist: today, companies possess global networks that can connect with knowledge from virtually any source. Today's challenge is to collaboratively transform that

knowledge into higher-value innovation. Their book introduces groundbreaking strategies and models for consistently achieving this goal. Authors Alpheus Bingham and Dwayne Spradlin draw on their own experience building InnoCentive, the pioneering global platform for open innovation (a.k.a. "crowdsourcing"). Writing for business executives, R&D leaders, and innovation strategists, Bingham and Spradlin demonstrate how to dramatically increase the flow of high-value ideas and innovative solutions both within enterprises and beyond their boundaries. They show: Why open innovation works so well. How to use open

innovation to become more agile and entrepreneurial. How to access Idea Markets more quickly, and get more value from them. How to overcome new forms of "Not Invented Here" syndrome. How to implement cultural, organizational, and management changes that lead to greater innovation. New trends in open innovation – and the opportunities they present. The authors present many new open innovation case studies, from P&G and Eli Lilly to NASA and the City of Chicago.

In this comprehensive new text, Chris Mayda offers an exciting alternative to conventional North American geographies. Throughout her thorough discussion of the physical and human geography of the United States and Canada, the author weaves in the key themes of environment and sustainability. Combining incisive analysis, rich description, human stories, and vibrant photographs, this text offers a complete and

vivid portrait of the region from human, physical, and cultural perspectives. Designed expressly for ease of teaching and learning, the book features color photographs and maps throughout.

yet? Let us learn more about this amazing place called Machu Picchu. About the people who built it, about the period when it was built, how it was built, how was this amazing place like and who discovered it. A professor from Yale Hiram Bingham used to explore the less travelled and used to look out for hidden places. He was looking everywhere for Vilcabamba but nobody knew about it. Then he met with someone called Arteaga and Bingham asked him about the presence of any nearby ruins. Arteaga informed him about ruins on the top of the mountains named Machu Picchu but was reluctant to

take him there because of presence of snakes. Bingham tried to offer him money and ultimately Arteaga agreed. They started the journey to the top of the mountain. They found a boy and Bingham asked him if there were any ruins. They went on and found some Inca stones and they stumbled upon a majestic stone staircase. Upon climbing the top of the staircase, they found a stone temple and got mesmerized by the beauty of the place. They found another temple which was as enthralling. Bingham had a black box camera and he wanted to take some pictures, the 1st picture being that of the

boy. Then he saw some vines in a distance and Bingham thought that it must be Vilcabamba. However, he removed the vines and understood that didn't discover Vilcabamba, fortune has been kind enough to lead him to a place that is even more wonderful. He had discovered Machu Picchu. The Machu Picchu was built by the Incas, around 1430. It was a small city but was built way on the top of the Andes mountain range. It was built at a remote place and was built between two peaks of the mighty Andes and at a height of 8,000 feet above the sea level. Known as the land of Gods- Machu

---

Picchu was quite an organized society with all the services- military, financial, tax, goods etc. With over 150 structures including homes, palaces and temples. No doubt that Machu Picchu is “the city in the clouds.”

*A Guide to the Culturally Rich and Amazing World Wonder of Machu Picchu*

Anchor

Barry Bingham, Sr., was one of this country's most influential journalists. Under his half-century of leadership, the Louisville Courier-Journal became one of America's leading newspapers, as attested by

six Pulitzer Prizes. In this illuminating oral history, Samuel Thomas weaves together excerpts from more than a dozen interviews with Bingham, along with selections from his writings and comments by his wife, Mary Caperton Bingham. Barry Bingham's influence was voiced principally through newspaper journalism, but, besides owning the Courier-Journal and its evening companion, the Louisville Times, the family enterprises included WHAS radio and television and Standard Gravure

Corporation, which also produced Sunday supplements for dozens of newspapers. Bingham's enterprises laid on the doorsteps of Kentuckians, and brought to them over the airwaves, insightful reporting and examination of state and local matters as well as in-depth coverage of national and world events. Bingham espoused many causes, including mental health, military preparedness, press freedom, and liberal politics. He championed civil rights, the performing arts, better education, historic

---

preservation, and land conservation. By training and predilection, Bingham was first and foremost a writer, but he was equally articulate as a conversationalist and public speaker. His recorded interviews, excerpted here, are clear and concise, expressive and informative. From these selections emerges a portrait of a man of extraordinary vision who used his wealth and power for the good of his community, his state, and his nation.

This volume provides case studies about successful strategies employed in diverse world areas for the protection of archaeological heritage resources. Some chapters focus on a search for solutions arrived at by diverse groups of people working in specific areas rather than simply describing loss of cultural heritage. Other chapters provide a long-term view of intensified efforts at protection of archaeological resources. The authors describe challenges and solutions derived by concerned people in eastern Asia (China, Japan,

Thailand), West Africa, Easter Island, Jordan, Honduras and more than one area of Peru. All of the authors draw upon deep, personal involvement with the protection of cultural heritage in each area. This volume is a timely addition to a growing number of conferences and publications about the management of cultural heritage—both archaeological and historical.

This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 edition. Excerpt: ...south of Salt Lake; as, Park City, Bingham, Mercur, and Tintic. Large amounts of silver-lead ore are produced

by the Park City district. This State is fifth in the production of gold and silver. It is one of the most promising fields in the West and the wise prospector will make no delay in getting into it. 606. Coal.--This State has exceedingly promising coal fields of which but little has been published. The present fields are in Rock Cliffs, Wasatch, Weber River, and Southern districts. 607. The State produced over \$400,000 in coal in 1907, being twenty-second in rank. 608. Copper.--The chief copper districts are

Bingham, Park City, Tintic, Frisco, and Alta. Less important are Little Cottonwood, Ophir, and Tutsagubet. 609. According to J. M. Boutwell, the copper ores of Bingham are the result of contact metamorphism brought about by monzonite intrusions through quartzites and limestones. The most marked mineralization is in the monzonite that has been most extensively fractured, the fractures permitting the access of the mineral solutions. This information should be of value to

---

prospectors and operators as stone are in the northwest. well. 610. At Park City the copper ore occurs in fissure veins and replacement deposits in limestone closely associated with porphyry intrusions. 384. 611. Utah produced about \$64,000,000 worth of copper in 1907, chiefly from Bingham and Park City, Tintic, and Frisco districts. 612. Antimony.--Antimony ore is mined in the southeastern part of the State. 613. Lead.--Large amounts of lead are produced from argentiferous galena. 614. Scattered beds of pumice

615. Mercury is produced at Mercur. 616. Valuable phosphates have been found, recent discoveries indicating that this State is a favorable field... Framing a Lost City The City of Bingham's Continuing Problems Principles of accounting and financial reporting for governmental and non-profit entities. General and special revenue funds, capital project funds, internal service funds, fiduciary funds etc. are

discussed in various chapters.

*The Lutheran Companion* Irwin/McGraw-Hill In his extraordinary debut collection, *Pure Slaughter Value*, Robert Bingham tracks the conscience of a generation that grew up educated, privileged, and starved for meaning. Bingham's strange sense of morbid fancy collides with a gutsy realism; the result is splendid wreckage: a young man is seduced by his first cousin (or maybe it's the other

---

way around) at her brother's wake ("The Other Family"); a bored couple plot to kill a man during their ski-resort honeymoon ("Marriage Is Murder"); a yuppie banker risks his whole perfect life for an affair with a junkie ("The Fixers"); an insurance-company bounty hunter tracks down walk-aways from drug and alcohol rehab ("Preexisting Condition"); and in the title story, an eleven-year-old boy is caught at the exquisitely uneasy

intersection of the safety of civilized surroundings. childhood play and the pain of grown-up love and longing. Cultureship MIT Press

Contrary to popular belief, leadership is not the solution to every business

---

problem or sustained business success. The answer lies in the culture of the organization. Strong business leaders follow their organization's culture and guide with a system of beliefs called Cultureship. Business managers who practice Cultureship know that developing and leading high-performing cultures can be learned and taught. Backed with irrefutable evidence, Cultureship introduces this system of beliefs and illustrates how changing culture can quickly lead to better business results; how every employee wants to grow, serve, and perform; how associates ultimately own the culture; and how successful leaders don't tell, they lead. Once you understand each of the ten beliefs and how they fit together as a unified whole, you will be on your way to becoming a great leader. Applying Cultureship to your own business, whether you're a novice or a more experienced manager, will differentiate your organization, increase productivity, lead to higher profits, and elevate you to a more advanced level of personal leadership success.

*A Regional Geography of the United States and Canada* Irwin Professional Publishing

When Hiram Bingham, a historian from Yale University, first saw Machu Picchu in 1911, it was a ruin obscured by overgrowth whose

---

terraces were farmed a by few families. A century later, Machu Picchu is a UNESCO world heritage site visited by more than a million tourists annually. This remarkable transformation began with the photographs that accompanied Bingham's article published in National Geographic magazine, which depicted Machu Picchu as a lost city discovered. Focusing on the practices, technologies, and materializations of Bingham's three expeditions to Peru (1911, 1912, 1914–1915), this book makes a convincing case that visualization, particularly through the camera, played a decisive role in positioning Machu Picchu as both a scientific discovery and a Peruvian heritage site. Amy Cox Hall argues that while Bingham's expeditions relied on the labor, knowledge, and support of Peruvian elites, intellectuals, and peasants, the practice of scientific witnessing, and photography specifically, converted Machu Picchu into a cultural artifact fashioned from a distinct way of seeing. Drawing on science and technology studies, she situates letter writing, artifact collecting, and photography as important expeditionary practices that helped shape the way we understand Machu Picchu today. Cox Hall also demonstrates that the photographic evidence was unstable, and, as

---

images circulated worldwide, the "lost city" took on different meanings, especially in Peru, which came to view the site as one of national patrimony in need of protection from expeditions such as Bingham's. [Engineering and Mining Journal](#) Rarebooksclub.com The #1 New York Times bestseller that has all America talking—with a new afterword on expanding your range—as seen on CNN's Fareed Zakaria GPS,

Morning Joe, CBS This Morning, and more. "The most important business—and parenting—book of the year." —Forbes "Urgent and important. . . an essential read for bosses, parents, coaches, and anyone who cares about improving performance." —Daniel H. Pink Shortlisted for the Financial Times/McKinsey Business Book of the Year Award Plenty of experts argue that anyone who wants to develop a skill, play an instrument, or lead their field should start early, focus

intensely, and rack up as many hours of deliberate practice as possible. If you dabble or delay, you'll never catch up to the people who got a head start. But a closer look at research on the world's top performers, from professional athletes to Nobel laureates, shows that early specialization is the exception, not the rule. David Epstein examined the world's most successful athletes, artists, musicians, inventors, forecasters and scientists. He discovered that in most fields—especially those that are complex and

---

unpredictable—generalists, rather than deepening their not specialists, are primed to excel. Generalists often find their path late, and they juggle many interests rather than focusing on one. They're also more creative, more agile, and able to make connections their more specialized peers can't see. Provocative, rigorous, and engrossing, Range makes a compelling case for actively cultivating inefficiency. Failing a test is the best way to learn. Frequent quitters end up with the most fulfilling careers. The most impactful inventors cross domains

rather than deepening their knowledge in a single area. As experts silo themselves further while computers master more of the skills once reserved for highly focused humans, people who think broadly and embrace diverse experiences and perspectives will increasingly thrive.

### **Pure Slaughter Value**

University Press of Kentucky  
In his influential 1991 book *Edge City*, Joel Garreau argued that every American city "is growing in the fashion of Los Angeles, with multiple urban cores". He named these

cores "edge cities" because they perform all of the city functions, but rise in places that were farmlands or villages only decades ago, far from the old downtowns. This new book expands and clarifies Garreau's pioneering concept as it develops a comprehensive theory of edge city growth and functions. The contributors draw on their expertise as geographers, political scientists, economics planners, and sociologists to offer a wide range of insights and analyses.

**Beyond Edge Cities** Irwin Professional Publishing  
How leaders can recast innovation's toughest trade-

---

offs—efficiency vs. flexibility, consistency vs. change, product vs purpose—as productive tensions. Why is leading innovation in today’s dynamic business environment so distressingly hit-or-miss? More than 90 percent of high-potential ventures don’t reach their projected targets. Surveys show that 80 percent of executives consider innovation crucial to their growth strategy, but only 6 percent are satisfied with their innovation performance. Should leaders aim for Steve Jobs-level genius, shower their projects with resources, or lean in to luck and embrace uncertainty? None of the above, say Christopher Bingham and Rory McDonald. Drawing on cutting-edge research and probing interviews with hundreds of leaders across three continents, in *Productive Tensions* Bingham and McDonald find that the most effective leaders and successful innovators embrace the tensions that arise from competing aims: efficiency or flexibility? consistency or change? product or purpose? Bingham and McDonald spotlight eight critical tensions that every innovator must master, and they spell out, with dozens of detailed examples of both success and failure, how to navigate them. How do you excite customers about a product they’ve never imagined? When is it wise to accept what the data is telling you, and when should you ignore the data and plow forward anyway? How can you maintain stakeholders’ trust and support during radical unforeseen course

---

corrections? Bingham and McDonald guide readers through innovation's thorniest tensions, using examples drawn from the experience of organizations as varied as P&G, Instagram, the US military, Honda, In-N-Out Burger, Slack, Under Armour, and the snowboarding company Burton.
