Geosynthetics and Their Applications
John Wiley & Sons
The Technical and Vocational Education and Training (TVET) college environment is marked by increasingly stark juxtapositions between what needs to be achieved in the post-school education sector and the increasing difficulty of current conditions. The 'triple challenge' of poverty, inequality and unemployment weighs heavily on the social, political and economic fabric of the country and expectations are high that the TVET colleges

can make a pivotal contribution to counter these challenges. Despite laudable increases in TVET enrolment, the education system needs to work harder to accommodate the weight of demand for post school further education and training (FET) band qualifications from young people not in education, employment or training. At the same time, it is vital to secure adequate quality in TVET programmes which depend so much on the competence and commitment of college lecturers. This collection offers a set of research papers that provide new analytic and empirical material on:

- The political economy of TVET types in different countries which, by comparison, illuminate the South African case;
- A periodisation of government interventions in the TVET sector over the last three decades;
- The unsettled state and status of TVET lecturers in relation to their job requirements and conditions of service;
- The halting evolution of collegial relationships between college lecturers towards higher collegiality;
- Employer expectations of college graduates and how colleges are responding; and
- An analysis of the outcomes of a college improvement intervention in Limpopo and the Eastern Cape.

This book will offer valuable information and insights for decision-makers as well as analysts of institutional change concerning links

between education and economic growth, with particular regard to TVET graduates' employment rates.

Engaging Employers in Apprenticeship Opportunities African Minds

This joint OECD-ILO publication provides guidance on how local and regional governments can foster business-education partnerships in apprenticeship programmes and other types of work-based learning, drawing on case studies across nine countries. There has been increasing interest in apprenticeships which combine on the job training with classroom-based study, providing a smooth transition from school to work. There are benefits to both individuals and employers from participating in apprenticeships, including increased productivity and job quality. Successful implementation is contingent on having a high level of employer engagement at the local level, notably in the design, development and delivery of programmes.

As global power relations increasingly favour international capital, it becomes crucial for labour and employment lawyers to

center their field in a supranational context. As long as wages, social security, and taxes remain national matters, states compete at this level in order to attract foreign investment. This does not bode well for employees or the self-employed. Most ameliorative measures come in the form of unenforceable and soft law and guidelines and recommendations. The conference recorded in this vitally important book confronts this losing battle of local responses to global challenges. The book reprints the papers submitted to that conference by twenty-three outstanding scholars from fourteen countries. Among the many critical issues they expose and discuss are the following: and the proliferation of varieties of non-standard employment; and protection of migrant workers and rights by regional organizations; and global and regional trends in the human resources function; and work training and education policy; and effectiveness of equality and non-discrimination standards; and involvement of employees in workplace decisionmaking; and the need for an equitable social safety net. In the course of the discussion the authors examine cases from many countries, including not only EU Member States

(both West and East) and the U.S., but also Japan, Chile, South Africa, and Indonesia. With a focus on the nexus of multinational enterprises and international standards, the book provides both a sharp image of where labour law stands in today and s world and revealing serious social problems in a clearer light than is usually encountered and a very valuable guide to directions to pursue and potential solutions, offered by some of the most engaged and committed minds in the field. It is an indispensable resource for legal workers in this and eye of the storm and of globalization.

Introduction to Policing, Third Edition continues to focus on the thought-provoking, contemporary issues that underscore the challenging and rewarding world of policing. Steven M. Cox, Susan Marchionna, and experienced law enforcement officer Brian D. Fitch balance theory, research, and practice to give students a comprehensive, yet concise, overview of both the foundations of policing and the expanded role of today's police officers. The accessible and engaging writing style, combined with stories from the field, make policing concepts and practices easy for students to understand and analyze. Unique coverage of policing in multicultural communities, the impact of technology on policing, and extensive coverage of policing strategies and procedures — such as those that detail the use of force — make this bestselling book a must-have for policing courses.

The New Engineering Contract

(NEC) is a modern day family of standard contracts that truly embraces the concept of partnership and encourages employers, designers, contractors and project managers to work together to achieve the client's objectives. The First Edition of the Engineering and Construction Short Subcontract has been produced in direct response to industry demand. As a version of the NEC Engineering and Construction Short Contract for its use as a Subcontract it is a simple form using simple English. The contract aims to cut time wasting, avoid disputes on simple subcontracts and will require little management input. Numbers & Needs FET Colleges Offers an insight into the circumstances under which the policies were developed, implemented and reviewed, as well as a study of the outcomes. This book addresses questions such as: How could an organisation with no previous experience of governing accomplish a peaceful transition to democracy? How did they do it and where are they going?

Shaping the Future of South Africa's Youth

Thomas Telford

It had been expected that the impact of the Superior Courts Bill - more particularly, the proposed merger of the Labour Court with the High Court and of the Labour Appeal Court with the Supreme Court of Appeal - on the dispute resolution system created by the Labour Relations Act would form a major focus of the revisions to this edition of Labour Relations Law. In the event, at the eleventh hour the Bill was again

referred back for further consideration and, at the time of going to print, its final version is still being awaited. However, the most important changes proposed by the existing version of the Bill are included in the chapter on dispute resolution. Should these be implemented, it is hoped that the chapter will provide a concise but serviceable introduction to the new regime of labour litigation in the High Court as well as a guide to the existing system. In the area of substantive law developments have continued apace, fuelled by a number of important and sometimes controversial court decisions. Possibly the most important has been the continued evolution of common law rights and remedies alongside their statutory counterparts. This trend is in marked contrast to the position in the United Kingdom, the source of so much of our individual employment law, where the statutory regime is seen more clearly as having, in principle, superseded the common law regime. Although the phenomenon has thus far manifested itself most clearly in the area of termination of employment, there is no reason why contractual rights should not

be asserted in competition with other statutory rights which do not abolish them expressly or by clear implication.

Closing the Gap is an accessible overview of the fourth industrial revolution (4IR) and the impact it is set to have on various sectors in South Africa and Africa. It explores the previous industrial revolutions that have led up to this point and outlines what South Africa's position has been through each one. With a focus on artificial intelligence as a core concept in understanding the 4IR, this book uses familiar concepts to explain artificial intelligence, how it works and how it can be used in banking, mining, medicine and many other fields. Written from an African perspective, Closing the Gap addresses the challenges and fears around the 4IR by pointing to the opportunities presented by new technologies and outlining some of the challenges and successes to date.

Season of Hope Trans Tech Publications Ltd

The main thesis of this book is that, given that South African education faces major challenges, the BRICS (Brazil, Russia, India, China and South Africa) constellation of states offers — thus far overlooked — a valuable tertium comparationis, a source of international comparative perspectives, to inform the domestic scholarly discourse on education. This book first investigates the national contexts and development of education in the BRICS countries, arguing that this grouping represents a valuable but yet overlooked field for illuminating South African education issues with international perspectives. The book consists of chapters arguing for and illustrating this thesis from a variety of angles. Common to all chapters is that authors used the comparative method in education, that is comparing the national education system, in their education societal context interrelationships, of the BRICS countries. The chapters focus on a number of critical issues in South African education, including the language of learning and teaching issue, the alignment of the world of education with the world of work, early childhood education, and the development of world-class

universities. Regarding the last, for example, China has been the terrain of the most intensive national projects of establishing world-class universities, with Project 985, Project 211, and the “Double First Class University” project. The chapters demonstrate what South Africa, in approaching her education issues, can learn from the experience of the BRICS countries.

World Development Indicators 2016 provides a compilation of relevant, high-quality, and internationally comparable statistics about global development and the fight against poverty. It is intended to help policymakers, students, analysts, professors, program managers, and citizens find and use data related to all aspects of development, including those that help monitor progress toward the World Bank Group's two goals of ending poverty and promoting shared prosperity. Six themes

are used to organize indicators—world view, people, environment, economy, states and markets, and global links. WDI 2016 includes: •A selection of the most popular indicators across 214 economies and 14 country groups organized into six WDI themes •A new section on the Sustainable Development Goals (SDGs) has replaced the one on Millennium Development Goals (MDGs). •The SDG section covers all 17 goals, and important targets to achieve these goals. Each goal has been presented in a maximum 2-page spread with selected indicators to explain the targets. •Each of the remaining sections includes an introduction, a map, a table of the most relevant and popular indicators for that theme together with a discussion of indicator compilation methodology. •A user guide describing resources available online and on mobile apps. Download the WDI DataFinder Mobile App and other Data Apps at data.worldbank.org/apps. WDI DataFinder is a mobile app for browsing the current WDI database on smartphones and tablets, using iOS and Android, available in four languages: English, French, Spanish, and Chinese. Use the app to: •Browse data using the structure of the WDI •Visually compare countries and indicators •Create, edit, and save customized tables, charts,

and maps •Share what you create on Twitter, Facebook, and via email

Ion Exchange Technology serves both as a reference and as a text book for technologists and engineers. While the present book is based mainly on ion exchange as practiced in the United States, the object was to produce a generally useful book which would deal with the fundamental problems, techniques, and operations of ion exchange such as mass transfer, equipment design, properties of ion exchange resins, and deionization. Also include are chapters on two types of applications—those that are used industrially on a large scale, and those which have not yet reached large-scale use but have impressive potentialities. In both the fundamental and applied chapters it was deemed necessary that the successful aspects of ion exchange operation be included. In addition, it was equally important to describe the problems and the inherent complexities encountered in the setting up of an ion exchange process. Wherever possible the economic factors were described realistically.
