Sir Alan Muir Wood sits in the pantheon of great civil engineers of the twentieth century. In *Civil Engineering in Context*, Sir Alan Muir Wood draws from his long career to place as he says 'civil engineering in context'. The book contains many

personal reminiscences of his life as an engineer from early days as a wartime marine engineer in the Royal Navy, through his more than 25 year career as a Partner and Senior Partner with Halcrow and as a tunnelling engineer of world renown. *Civil Engineering in Context* also presents Sir Alan's strongly held and sometimes controversial views on how civil engineering as an industry has developed since the pragmatic enterprise of the nineteenth century, through a twentieth century where much of the momentum was lost, and how it should be developing in the twenty-first century. Sir Alan ranges across many topics which directly affect the role of the engineer, including management and the law, systems and design, and ethics and politics. He also

discusses his contribution and the wider aspects to some of the major projects of the twentieth century such as the Channel Tunnel. *Civil Engineering in Context* provides an enlightening insight into the civil engineer and civil engineering through the eyes of one of its most eminent protagonists.

Many company slogans and mantras profess that passion is part of the way they work and that it is important to them. Passion over the centuries has been defined as something that makes humans slaves to their emotions and exerts an almost overwhelming compulsion to participate in an activity or relationship. In a profession such as consultant civil engineering that is so strongly anchored in the objective and scientific, what place has a motivator such as passion? This research takes a sample of consultant civil engineers and assesses two types of passion, harmonious passion and obsessive

passion, and secondly measures their job performance. It was found amongst the engineers sampled that those who were more obsessively passionate achieved higher performance levels across the items measured and those who were more harmoniously passionate had little to no relationship with the performance items measured. This suggests that obsessive passion has a relationship with various performance indicators related to consultant civil engineers and contributes to the knowledge gap of there being no research carried out with respect to passion and construction professionals.

Attrition in the Engineering disciplines at all Universities is a huge problem. This text, in its first edition, promised to educate all interested in the Engineering area as a whole. Educators and

students bought this book because of their great interest in seeing engineers thrive and made it wildly successful. In this edition more information about engineering careers and the discipline generally is to be included. This practical approach is edging out the voluminous, traditional introduction to engineering books. In this second edition of The Engineering Student Survival Guide, Chapter 2 has been heavily revised with a completely new section entitled, "Ten Tricks of the Old-Timers (Upperclassmen)". Much of the information pertaining to the time before a freshman's first class begins has been deleted. This book is part of the B.E.S.T. (Basic Engineering Series and Tools) Series, which consists of modularized textbooks offering virtually every topic and specialty likely to be of interest to engineers. All the texts boast distinguished authors and the most current content. The goal of this series is to provide the educational community with material that is timely, affordable, of high quality, and flexible in how it is used.
