While writing the book, we have continuously kept in mind the examination requirements of the students preparing for U.P.S.C.(Engg. Services) and A.M.I.E.(I) examinations. In order to make this volume more useful for them, complete solutions of their examination papers up to 1975 have also been included. Every care

has been taken to make this treatise as self-explanatory as possible. The subject matter has been amply illustrated by incorporating a good number of solved, unsolved and well graded examples of almost every variety.

The awareness of environment protection is a great achievement of humans; an expression of self-awareness. Even though the idea of living while protecting the environment is not new, it has never been so widely and deeply practiced by any nations in history like it is today. From the late 90s in the last century, the surprisingly fast dev

This book highlights advances and prospects of a highly versatile and dynamic research field: Therapeutic ultrasound. Leading experts in the field describe a wide range of topics related to the development of therapeutic ultrasound (i.e., high intensity focused ultrasound, microbubble-assisted ultrasound drug delivery, low intensity pulsed ultrasound, ultrasound-sensitive nanocarriers), ranging from the biophysical concepts (i.e., tissue ablation, drug and gene delivery, neuromodulation) to therapeutic applications (i.e., chemotherapy, sonodynamic therapy, sonothrombolysis, immunotherapy, lithotripsy, vaccination). This book is an indispensable source of information for students, researchers and clinicians dealing with non-invasive image-guided ultrasound-based therapeutic interventions in the fields of oncology, neurology, cardiology and nephrology.

Communication of Impressions via Sound S. Chand Publishing Based on ongoing fieldwork in the Akihabara neighborhood of Tokyo, specifically a targeted subproject from 2014 to 2015, this book explores how and to what effect lines are drawn by producers, players and critics of bish jo games. Focusing on interactions with manga/anime-style characters, these adult computer games often feature explicit sex acts. Noting that the bish jo, or "cute girl characters," in these games can appear quite young, legal actions have been taken in a number of countries to categorize and prohibit

the content as child abuse material. In response to the risk of manga/anime images encouraging underage sexualization, lawmakers are moved to regulate them in the same way as photographs or film; triggered by images, the line between fiction and reality is erased, or redrawn to collapse forms together. While Japanese politicians continue to debate a similar course, sustained engagement with bishōjo game producers, players and critics sheds light on alternative movement. Manga/anime-style characters trigger an affective response in interactions with their creators and users, who draw and negotiate lines between fiction and reality. Interacting with characters and one another, bishōjo gamers draw lines between what is fictional and what is "real," even as the characters are real in their own right and relations with them are extended beyond games; some even see the characters as significant others and refer to them using intimate terms of commitment such as "my wife." This book argues for understanding the everyday practice of insisting on lines, or drawing a line between humans and nonhumans and orienting oneself toward the drawn lines of the latter, as demonstrating an emergent form of ethics. Occurring individually and socially in both private and public spaces, the response to fictional characters not only discourages harming human beings, but also supports life in more-than-human worlds. For many in contemporary Japan and beyond, interactions and relations with fictional and real others are nothing short of lifelines.

The fifth international Conference in Medical Image Computing and Computer Assisted Intervention (MICCAI 2002) was held in Tokyo from September 25th to 28th, 2002. This was the first time that the conference was held in Asia since its foundation in 1998. The objective of the conference is to offer clinicians and scientists the opportunity to collaboratively create and explore the new medical field. Specifically, MICCAI offers a forum for the discussion of the state of art in computer-assisted interventions, medical robotics, and image processing among experts from multi-disciplinary professions, including but not limited to clinical doctors, computer scientists, and mechanical and biomedical engineers. The expectations of society are very high; the advancement of medicine will depend on computer and device technology in coming decades, as they did in the last decades. We received 321 manuscripts, of which 41 were chosen for oral presentation and 143 for poster presentation. Each paper has been included in these proceedings in eight-page full paper format, without any differentiation between oral and poster papers. Adherence to this full paper format, along with the increased number of manuscripts, surpassing all our expectations, has led us to issue two proceedings volumes for the first time in MICCAI 's history. Keeping to a single volume by assigning fewer pages to each paper was certainly an option for us considering our budget constraints. However, we decided to increase the volume to offer authors maximum opportunity to argue the state of art in their work and to initiate constructive discussions among the MICCAI audience.

The woodlands of Japan vary substantially from north to south, and the patterns of their use and abuse differed from area to area during the Edo, or early modern, period (1600 – 1868). Nevertheless, the basic characteristics and rhythms of forest history were common to all of Japan (except the sparsely populated northern island of Hokkaidō). It is possible, therefore, to illuminate the general experience by scrutinizing a section of the whole. The section selected here is Akita, a prefecture of northern Japan whose forests are among the nation 's most famous. Three considerations make this choice

attractive. The topic has clearly delineated boundaries, largely because the Akita region was a single coherent political unit during the Edo period; the documentation on the early modern forest situation there is extensive and accessible; finally, and as a consequence of the second factor, Japanese scholars have already published excellent studies on key aspects of Akita forestry. These factors have made this a relatively convenient area to examine and discuss in the short compass of this study.

This book aims to provide an account of both what and how onomatopoeia communicate by applying ideas from the relevance theoretic framework of utterance interpretation. It focuses on two main aspects of the topic: the contribution that onomatopoeia make to communication and the nature of multimodal communication. This is applied in three domains (food discourse, visual culture in Asia and translation) in the final sections of the book. It will be of interest to scholars working in the fields of pragmatics, semantics, cognitive linguistics, stylistics, philosophy of language, literature, translation, and Asian studies.

Since the MeToo hashtag went viral in 2017, the movement has burgeoned across social media, moving beyond Twitter and into living rooms and courtrooms. It has spread unevenly across the globe, with some countries and societies more impacted than others, and interacted with existing feminist movements, struggles, and resistances. This interdisciplinary handbook identifies thematic and theoretical areas that require attention and interrogation, inviting the reader to make connections between the ways in which the #MeToo movement has panned out in different parts of the world, seeing it in the context of the many feminist and gendered struggles already in place, as well as the solidarities with similar movements across countries and cultures. With contributions from gender experts spanning a wide range of disciplines including political science, history, sociology, law, literature, and philosophy, this groundbreaking book will have contemporary relevance for scholars, feminists, gender researchers, and policy-makers across the globe.

Satoyama is a Japanese term describing mosaic landscapes of different ecosystems—secondary forests, farm lands, irrigation ponds and grasslands—along with human settlements managed to produce bundles of ecosystem services for human wellbeing. The concept of satoyama, longstanding traditions associated with land management practices that allow sustainable use of natural resources, has been extended to cover marine and coastal ecosystems ( satoumi). These landscapes and seascapes have been rapidly changing, and the ecosystem services they provide are under threat from varioussocial, economic, political, and technological factors. Satoyama-Satoumi Ecosystems and Human Well-Being presents the findings of the Japan Satoyama Satoumi Assessment (JSSA), a study of the interaction between humans and ecosystems in Japan. It was written by the 200-plus authors, stakeholders, and reviewers from Japan and elsewhere who make up the JSSA team. The study analyzes changes that have occurred in satoyama-satoumi ecosystems over the last 50 years and identifies plausible future scenarios for the year 2050,

taking into account various drivers such as governmental and economic policy, climate change, technology, and sociobehavioral responses. This provides a new approach to land-use planning that addresses not only economic development but also cultural values and ecological integrity. This book is a key reference text for development planners, policymakers, scientists, postgraduate students, and others interested in the environment and development.

Volume VI of this acclaimed series is now available in an abridged paperback edition. The result of years of work by scholars from all over the world, The UNESCO General History of Africa reflects how the different peoples of Africa view their civilizations and shows the historical relationships

between the various parts of the continent. Historical connections with other continents demonstrate Africa's contribution to the development of human civilization. Each volume is lavishly illustrated and contains a comprehensive bibliography. Volume VI covers the period from the beginning of the nineteenth century to the onset of the European "scramble" for colonial territory in the 1880s. In spite of a growing European commercial, religious, and political presence during the first three quarters of the century, outside influences were felt indirectly by most African societies, and they made a number of culturally distinctive attempts to modernize, expand, and develop. These are detailed in four thematic chapters, twenty-three chapters detailing developments in specific areas, and two concluding chapters tracing the African diaspora and assessing the state of the Continent's political, economic, and cultural development on the eve of the European conquest.
