Communicating in the Real World Arco

Many company slogans and mantras profess that passion is part of the way they work and that it is important to them. Passion over the centuries has been defined as something that makes humans slaves to their emotions and exerts an almost overwhelming compulsion to participate in an activity or relationship. In a profession such as consultant civil engineering that is so strongly anchored in the objective and scientific, what place has a motivator such as passion? This research takes a sample of consultant civil engineers and assesses two types of passion, harmonious passion and obsessive passion, and secondly measures their job performance. It was found amongst the engineers sampled that those who were more obsessively passionate achieved higher performance levels across the items measured and those who were more harmoniously passionate had little to no relationship with the performance items measured. This

suggests that obsessive passion has a relationship with various performance indicators related to consultant civil engineers and contributes to the knowledge gap of there being no research carried out with respect to passion and construction professionals.

Attrition in the Engineering disciplines at all Universities is a huge problem. This text, in its first edition, promised to educate all interested in the Engineering area as a whole. Educators and students bought this book because of their great interest in seeing engineers thrive and made it wildly successful. In this edition more information about engineering careers and the discipline generally is to be included. This practical approach is edging out the voluminous, traditional introduction to engineering books. In this second edition of *The Engineering Student Survival Guide*, Chapter 2 has been heavily revised with a completely new section entitled, "Ten Tricks of the Old-Timers (Upperclassmen)". Much of the information pertaining to the time before a freshman's first class begins has been deleted. This book is part of the B.E.S.T. (Basic Engineering Series

and Tools) Series, which consists of modularized textbooks offering virtually every topic and specialty likely to be of interest to engineers. All the texts boast distinguished authors and the most current content. The goal of this series is to provide the educational community with material that is timely, affordable, of high quality, and flexible in how it is used.
