This volume represents one outcome of the initiatives, taken from time to time by the NATO Science Committee, to add to the work of supporting civil science within the Alliance by mounting open meetings or other projects dealing with some topical aspect of science and technology policy. Past examples have included the 20th anniversary meeting of the establishment of the Science Committee in 1978 which made a review of the achievements of the various programmes. It proved to be a valuable opportunity to take stock of the impact of science and technology on Western societies and was a particularly useful occasion for a critical analysis of the changing nature and social role of science and technology. In contrast, the Science Committee Conferences in 1973, and 1976, on the 'Technology of Efficient Energy Utilization' and on 'Thermal Energy Storage' were responses of the Committee to specific technological problems, engendered by the then acute energy supply position. A similar technologically oriented study was made in 1975 of the 'Rational Use of Potentially Scarce Metals'. These initiatives were the counterpoint to the bulk of the continuing work of the Committee in funding scientific mobility in the Alliance, as support to civil science. This latter is done competitively in response to unsolicited applications. The Committee hopes to demonstrate, by its special activities, its flexibility and responsiveness to the evolving activities, technologists and policy makers.

This book contains nine classic papers from the Offshore Technology Conference (OTC), which is the world's leading event for the development of offshore resources in the fields of drilling, exploration, production, and environmental protection. These papers provide innovation in, vision for, and lasting impact on design, construction or installation of offshore infrastructure, and have influence far beyond the offshore industry, some becoming integral to the design process of onshore structures such as buildings and bridges. The ASCE OTC Committee have chosen these classic documents to represent the outstanding papers from the early years of the OTC that withstand test of time. They contain engineering methods that have proven their value through widespread use, permeating codes, standards, guidelines and engineering software. Topics include: wave force evaluation; ultimate strength and reverse capacity; tubular joint material and design; pile foundations; and pipeline installation.

Muslim Education in the 21st Century reinvestigates the current state of affairs in Muslim education in Asia whilst at the same time paying special attention to Muslim schools' perception of educational changes and the reasons for such changes. It highlights and explores the important question of whether the Muslim school has been reinventing itself in the field of pedagogy and curriculum to meet the challenges of the 21st century education. It interrogates the schools whose curriculum content carry mostly the subject of religion and Islam as its school culture. Typologically, these include state-owned or privately-run madrasah or dayah in Aceh, Indonesia; pondok, traditional Muslim schools largely prevalent in the East Malaysian states and Indonesia; pesantren, Muslim boarding schools commonly found in Indonesia; imam-khatip schools in Turkey, and other variations in Asia. Contributed by a host of international experts, Muslim Education in the 21st Century focuses on how Muslim educators strive to deal with the educational contingencies of their times and on Muslim schools' perception of educational changes and reasons for such changes. It will be of great interest to anyone interested in Asian and Muslim education.
