The computing profession faces a serious gender crisis. Today, fewer women enter computing than anytime in the past 25 years. This book provides an unprecedented look at the history of women and men in computing, detailing how the computing profession emerged and matured, and how the field became male coded. Women's experiences working in offices, education, libraries, programming, and government are examined for clues on how and where women succeeded—and where they struggled. It also provides a unique international dimension with studies examining the U.S., Great Britain, Germany, Norway, and Greece. Scholars in history, gender/women's studies, and science and technology studies, as well as department chairs and hiring directors will find this volume illuminating.

Why Women Are Leaving Computing

An engaging introduction to the core concepts, theories, actors and issues in global politics. Featuring a combination of chapters authored by leading scholars, researchers and practitioners from around the world, this textbook takes into account the historical development of international relations and the web of dynamics that forms the subject, resulting in a clear analysis of the field from a variety of perspectives. Chapters cover topics including race, colonialism, gender, sexuality, digital globalization, the environment and security studies and are supported by a range of case studies, key boxes and illustrative material to aid students in their practical application of theoretical ideas. The book is also complimented by a bespoke curated website, featuring a regularly updated collection of interactive learning material and hosted on E-International Relations, the world's leading open access IR website. Portraying the most compelling issues of our time, and presenting the necessary tools to analyse and debate the subject, this is an invaluable resource for anyone studying international relations.
