This comprehensive resource  
provides readers with the tools  
necessary to perform analysis of  
various waveforms for use in radar  
systems. It provides information  
about how to produce synthetic  
aperture (SAR) images by giving a  
tomographic formulation and  
implementation for SAR imaging.  
Tracking filter fundamentals, and  
each parameter associated with the  
filter and how each affects tracking  
performance are also presented.

Various radar cross section  
measurement techniques are  
covered, along with waveform  
selection analysis through the  
study of the ambiguity function for  
each particular waveform from

simple linear frequency modulation (LFM) waveforms to more complicated coded waveforms. The text includes the Python tool suite, which allows the reader to analyze and predict radar performance for various scenarios and applications. Also provided are MATLAB® scripts corresponding to the Python tools. The software includes a user-friendly graphical user interface (GUI) that provides visualizations of the concepts being covered. Users have full access to both the Python and MATLAB source code to modify for their application. With examples using the tool suite are given at the end of each chapter, this text gives readers a clear understanding of how important target scattering is in areas of target detection, target tracking, pulse integration, and target discrimination.
