Introduction to Cladistics

Lab 1. Cladistics (Adapted from BiologyJunction.com) I. You are a scientist trying to determine the relationship between the organisms below. Using your knowledge of cladistics create a cladogram that represents how these animals are related. II. To help you better understand how to build a cladogram, watch this tutorial: III. Consider the following characteristics when designing your cladogram.

Biology 164 Laboratory PHYLOGENETIC SYSTEMATICS

The best way to begin understanding how cladistics works is to go through an exercise in which you build a phylogeny using a cladogram. To do this we will use the group of hypothetical frogs shown below. This group consists of a defined outgroup (O) and an ingroup of six species (frogs A-F) for which we want to build a cladogram.

Understanding Cladistics | AMNH

The basic idea behind cladistics is that members of a group share a common evolutionary history, and are "closely related," more so to members of the same group than to other organisms. These groups are recognized by sharing unique features which were not present in distant ancestors.

Carolina Solution Sheets | Carolina.com

Cladistics aims to find groups that share a unique evolutionary history, and it does not recognize groups that do not. Because the group composed of 3, 4, and 5 contains all of the descendents of their most recent common ancestor, we call that group monophyletic ; only monophyletic groups are recognized by cladists.

I then ask my "gamer" students to inform the class about which appeared first, the X-Box One or the GameCube (even my non-gamers know that the Game Cube is older than the Xbox One). I tell the students that this is an important difference between what we are looking at, and what we will be learning about today, which is cladistics.
