By the middle of the twenty-first century, more than fifty per cent of the world's population will live in an urban environment. Most of this new urban growth will take place in Asia and Africa, yet most governments in these two continents seem woefully unprepared for the challenges they will face in providing their urban citizens with the basic services and security from poverty, environmental degradation and crime. It is in this context that in-depth studies which lay bare the contours and characteristics of society and institutions in the urban setting of Third World countries assume importance and urgency. Most studies on urbanisation in developing countries concentrate on slums and shanty towns in isolation from the rest of the society. By contrast, *Social Formation in Dhaka, 1985-2005* analyses urbanisation and urban society in a holistic manner, connecting the poor with the non-poor and delineating the change agents of the city. As the first longitudinal study of the social structure of any Third World Megacity, this book will be of interest to urban sociologists, policy-makers, NGOs, and researchers engaged in understanding the development in cities in the global south.

Geothermal energy stands out because it can be used as a baseload resource. This book, unlike others, examines the geology related to geothermal applications. Geology dictates (a) how geothermal resources can be found, (b) the nature of the geothermal resource (such as liquid- or vapor-dominated) and (c) how the resource might be developed ultimately (such as flash or binary geothermal plants). The compilation and distillation of geological elements of geothermal systems into a single reference fills a notable gap.

Due to an increase in the wide-range of chemicals in petrochemical processing industries, as well as frequency of use, there has been a steady rise in flammability problems and other hazards. *Hazardous Area Classification in Petroleum and Chemical Plants: A Guide to Mitigating Risk* outlines the necessities of explosion protection in oil, gas and chemical industries, and discusses fire and occupancy hazards, extinguishing methods, hazard identification, and classification of materials. This book addresses these issues and concerns and presents a simple hazard identification system to help offset future problems. It offers information on the hazards of various materials and their level of severity as it relates to fire prevention, exposure, and control. The system provides an alerting signal and on-the-spot information to help protect lives in an industrial plant or storage location during fire emergencies. Understanding the hazard helps to ensure that the process equipment is properly selected, installed, and operated to provide a safe operating system. This text also includes a summary of the rules, methods, and requirements for fighting a fire, introduces various hazard identification systems.

- Includes a summary of the rules, methods, and requirements needed to extinguish a fire
- Introduces various hazard identification systems
- Includes concepts for layout and spacing of equipment in process plants

The book serves as resource for plant design engineers as well as plant protection and safety personnel in planning for effective firefighting operations.
