It's about your financial potential. It's about discovering the millionaire investor in you.

American Vocational Journal Causey Enterprises, LLC

" [A] remarkable how-to . . . offers freeze-frame instructions on medieval martial arts using swords, shields, poleaxes, daggers and wrestling " (Publishers Weekly). Written by German fencing master Hans Talhoffer in 1467, this book illustrates the intricacies of the medieval art of fighting, covering both the " judicial duel " (an officially sanctioned fight to resolve a legal dispute) and personal combat. Combatants in the Middle Ages used footwork, avoidance, and the ability to judge and manipulate timing and distance to exploit and enhance the sword ' s inherent cutting and thrusting capabilities. These skills were supplemented with techniques for grappling, wrestling, kicking and throwing the opponent, as well as disarming him

---

by seizing his weapon. Every attack contained a defense and every defense a counterattack. Talhoffer reveals the techniques for wrestling, unarmored fighting with the long sword, poleaxe, dagger, sword and buckler, and mounted combat. This unparalleled guide to medieval combat, illustrated with 268 contemporary images, provides a glimpse of real people fighting with skill, sophistication and ruthlessness. This is one of the most popular and influential manuals of its kind. " This superb treatise, amply illustrated, provides valuable insight into the real world of medieval combat. Magnificent! " —Books Monthly

The Metal Lathe

English Mechanic and Mirror of Science

Commerce Business Daily

Using castings from your charcoal foundry (see Book 1 in the series: The Charcoal Foundry by David Gingery) and simple hand methods (no machine tools needed!) you can build a sturdy and accurate bed for a metal lathe. Then additional castings, common hardware items and improvised equipment will add the headstock, tailstock, carriage and all the remaining parts to complete the lathe. Illustrated with photos and drawings to show you all you need to know about patterns, molding, casting and finishing the parts. The lathe specs. include a 7" swing over the bed and 12" between centers. Adjustable tailstock with set-over for taper turning. Adjustable gibs in sliding members and adjustable sleeve bearings in the headstock. A truly practical machine capable of precision work. Once you have a foundry to cast the parts and a lathe to machine them you can tackle more exotic projects.

The Manual of Engineering Drawing has long been recognised as the student and practising engineer's guide to producing engineering drawings that comply with ISO and British Standards. The information in this book is equally applicable to any CAD application or manual drawing. The second edition is fully in line with the requirements of the new British Standard BS8888: 2002, and will help engineers, lecturers and students with the transition to the new standards. BS8888 is fully based on the relevant ISO standards, so this book is also ideal for an international readership. The comprehensive scope of this book encompasses topics including orthographic, isometric and oblique projections, electric and hydraulic diagrams, welding and adhesive symbols, and guidance on tolerancing. Written by a member of the ISO committee and a former college lecturer, the Manual of Engineering Drawing combines up-to-the-minute technical accuracy with clear, readable explanations and numerous diagrams. This approach makes this an ideal student text for vocational courses in engineering drawing and undergraduates studying engineering design / product design. Colin Simmons is a member of the BSI and ISO Draughting Committees and an Engineering Standards Consultant. He was formerly Standards Engineer at Lucas CAV. \* Fully in line with the latest ISO Standards \* A textbook and reference guide for students and engineers involved in design engineering and product design \* Written by a former lecturer and a current member of the relevant standards committees
