The Business, Innovation and Skills Committee has today published a report containing a number of conclusions and

recommendations resulting from its inquiry into the Insolvency Service, including: (i) without an increase in resources the investigations unit will be unable to increase the number of cases it can prosecute which will further undermine stakeholder confidence; (ii) there is a risk that further reductions in annual running costs and staff may put undue pressure on the Insolvency Service to deliver; (iii) it is clear from the evidence that the fee-generated income model for the Official Receiver Service is unreliable in the current economic climate (iv) issues remain with pre-pack administration, which need to be addressed; (v) given the level of debt relief they can receive, it would not be unreasonable to increase the £525 upfront fee that individual debtor bankrupts have to pay. The Committee welcomes the news that the regulators and the insolvency industry have been working together to create common regulatory standards across the profession. The creation of a single gateway for complaints, common standards and a common appeals process would be an important step in this regard. The Service should be required to publish an annual report that charts progress in this area.

This volume provides a detailed examination of nearly 1,400 years of Roman history, from the foundation of the city in the eighth century BC until the evacuation of Roman troops from Alexandria in AD 642 in the face of the Arab conquests. Drawing on a vast array of ancient texts written in Latin, Greek, Syriac, Armenian, and Arabic, and relying on a host of

inscriptions, archaeological data, and the evidence from ancient art, architecture, and coinage, *The Roman World from Romulus to Muhammad* brings to the fore the men and women who chronicled the story of the city and its empire. Richly illustrated with 71 maps and 228 illustrations—including 20 in colour—and featuring a detailed glossary and suggestions for further reading, this volume examines a broad range of topics, including ancient climate change, literature, historiography, slavery, war and conquest, the development of Christianity, the Jewish revolts, and the role of powerful imperial women. The author also considers the development of Islam within a Roman historical context, examines the events that led to the formation of the post-Roman states in Western Europe, and contemplates affairs on the imperial periphery in the Caucasus, Ethiopia, and the Arabian Peninsula. Emphasising the voices of antiquity throughout, *The Roman World from Romulus to Muhammad* is an invaluable resource for students and scholars interested in the beguiling history of the world 's most famous empire.

An exploration of Johannesburg's post-apartheid's city administration's governance of conflict from 1996 to the current day, in the case of service delivery protests and shifts in city policy. The author, Li Pernegger, focuses in-depth on the water wars in Orange Farm, insurgent informal traders in the inner city, and the billing battle fought by the middle class. This book provides deep insights into facets of protests: from the local state's qualification of the conflicts; its portrayals of protestors; its agonistic and antagonistic responses to protestors' claims; to power dynamics and the forms of agreement reached. Pernegger considers what the practical prospects of agonism might be for the local government to regard city strife in its practices of governance as a constructive – rather than destructive – force for change, and the realisation of democratic ideals for its ordinary citizens.

As seen on Sky News All Out Politics ' There ' s no understanding global inequality without understanding its history. In The Divide, Jason Hickel brilliantly lays it out, layer upon layer, until you are left reeling with the outrage of it all. ' - Kate Raworth, author of Doughnut Economics . The richest eight people control more wealth than the poorest half of the world combined. . Today, 60 per cent of the world ' s population lives on less than \$5 a day. . Though global real GDP has nearly tripled since 1980, 1.1 billion more people are now living in poverty. For decades we have been told a story: that development is working, that poverty is a natural phenomenon and will be eradicated through aid by 2030. But just because it is a comforting tale doesn ' t make it true. Poor countries are poor because they are integrated into the global economic system on unequal terms, and aid only helps to hide this. Drawing on pioneering research and years of first-hand experience, The Divide tracks the evolution of global inequality – from the expeditions of Christopher Columbus to the present day – offering revelatory answers to some of humanity ' s greatest problems. It is a provocative, urgent and ultimately uplifting account of how the world works, and how it can change for the better.

"The financial sector has succeeded in depicting itself as part of the productive economy, yet for centuries banking was recognized as being parasitic. The essence

of parasitism is not only to drain the host's nourishment, but also to dull the host's brain so that it does not recognize that the parasite is there. This is the illusion that much of Europe and the United States suffer under today. The aim of this book is to pierce this illusion and replace junk economics with economics based on reality. In Killing the Host, Michael Hudson argues that financial crises will continue unless we radically transform our economic and political structures, and reclaim the best ideas of classical economics. Ominous, yet clear-eyed and prophetic, Hudson provides viable solutions to our economic problems, at a time when politicians have shown themselves unable to understand our economy much less fix it" --

The Heavily Indebted Poor Countries (HIPC) Debt Initiative was designed to relieve the high external debt of some of the world's poorest nations. The Initiative was put in place by the World Bank and the International Monetary Fund (IMF) in 1996 and enhanced in 1999. The HIPC Debt Initiative addresses a key obstacle to economic growth and poverty reduction, but it also contains multiple and overly-ambitious objectives. This work is an independent evaluation which assesses the progress and prospects of the HIPC Debt Initiative achieving its objectives.

The Heavily Indebted Poor Countries (HIPC) Debt Initiative was established by the World Bank and the International Monetary Fund in 1996, in order to relieve the high external debt of some of the world's poorest nations. The initiative seeks to provide a permanent end to debt rescheduling, promote growth and release resources for social policies targeted at poverty reduction, as part of the overall development assistance framework. This publication updates progress made under the initiative since the evaluation undertaken in March 2003 ('Debt relief for the poorest: an OED review of the HIPC initiative") (ISBN 082135521X). It finds that the Enhanced HIPC initiative cut debt ratios in half for 18 countries, but in eight of these countries, the ratios have come to once again exceed HIPC thresholds. The study concludes that debt reduction alone is not a sufficient instrument to affect the multiple drivers of debt sustainability, as sustained improvements in export diversification, fiscal management, the terms of new financing and public debt management are also needed; measures that fall outside the ambit of the HIPC initiative.

Progress on fiscal policy during 2006/07 in Malawi was slower than expected. The 2006/07 (July-June) fiscal strategy focused on reducing domestic debt. In the third Poverty Reduction and Growth Facility (PRGF) review, the end-June target for domestic debt repayments was increased substantially. Domestic borrowing exceeded the adjusted target at end-December 2006 by MK 4.1 billion (0.9 percent of GDP). The government partially redressed this overrun by curtailing discretionary spending in the fourth quarter, as the scale of the end-December overrun became clear.

The global financial system has proven increasingly unstable and crisis-prone since the early 1980s. The system has failed to serve either creditors or debtors well. This has been reinforced by the global financial crisis of 2008, where we have seen systemic weaknesses bring rich countries to the brink of bankruptcy and visit appalling suffering on the poorest citizens of poor countries. Yet the regulatory responses to this crisis have involved little thinking from outside the box in which the crisis was delivered to the world. This book presents a powerful indictment of this regulatory failure and calls for greatly increased attention to international financial law and analyses new regulatory measures with the potential to make a new recognition of the principles that ought to underlie it. Using a historical approach that compares the various financial crises of the past three decades, the authors clearly show how misconceived economic policy responses have paved the way for each next 'crash'. Among the numerous topics that arise in the course of this revealing analysis are the following: overvalued exchange rates; excess liquidity in rich countries; premature liberalisation of local financial markets; capital controls; derivatives markets; accounting standards; credit ratings and the conflicts in the role of credit rating agencies; investor protection arrangements;

insurance companies; and payment, clearing and settlement activities. The authors offer detailed commentary on: the role of multilateral development banks, the IMF and the WTO in responding to crises; the role of the Basel Accords, the Financial Stability Forum and Board, and the responses of the European Commission, the US, and the G20 to the most recent crisis. The book concludes by exploring systemic game-changing reforms such as bank levies, financial activities taxes and financial transaction taxes, and a global sovereign bankruptcy regime; as well as measures to remove the currency mismatches from the balance sheets of developing countries. Apart from its great usefulness as a detailed introduction to the international financial system and its regulation, the book is enormously valuable for its clear identification of the areas of regulatory failure, and its analysis of new regulatory approaches that offer the potential for a genuinely more stable system. Banking and investment policymakers at every level, the lawyers that serve these markets and the regulators that seek to regulate them, cannot afford to neglect this book.
