Thinking Outside the Box brings together some of the best and most challenging scholarship about TV genres, exploring their genesis, their functions and development, and the interaction of disparate genres. The authors argue that genre is a process rather than a static category and that it signifies much about the people who produce and watch the shows. In addition to considering traditional genres such as sitcoms, soap operas, and talk shows, the contributors explore new hybrids, including reality programs, teen-oriented science fiction, and quality dramas, and examine how many of these shows have taken on a global reach.

Identifying historical continuities and envisioning possible trends, this is the richest and most current study of how television genres form, operate, and change.

A spellbinding exploration of the human capacity to imagine the future Our ability to think about the future is one

of the most powerful tools at our disposal. In *The Invention of Tomorrow*, cognitive scientists Thomas Suddendorf, Jonathan Redshaw, and Adam Bulley argue that its emergence transformed humans from unremarkable primates to creatures that hold the destiny of the planet in their hands. Drawing on their own cutting-edge research, the authors break down the science of foresight, showing us where it comes from, how it works, and how it made our world. Journeying through biology, psychology, history, and culture, they show that thinking ahead is at the heart of human nature—even if we often get it terribly wrong. Incisive and expansive, *The Invention of Tomorrow* offers a fresh perspective on the human tale that shows how our species

clawed its way to control the future.

In the last twenty years, several periods of turmoil have shaped the financial and economic system. Many regulatory policies, such as Basel III, have been introduced to overcome further crises and scandals. In addition, monetary policy has experienced a transition from conventional to unconventional frameworks in most industrialized and emerging economies. For instance, turning to hedge and diversification of portfolios, commodities markets have attracted increasing interest. More recently, new forms of money have been introduced, such as virtual money. These changes have influenced governance features at both macro and micro levels. Therefore, calls for ethical and sustainable standards in financial and economic spheres have been growing since 2007.

Problem-Solving Strategies for Efficient and Elegant Solutions, Grades 6-12 Bloomsbury Publishing

At the heart of this volume is the recognition that children's engagement with play and story are intrinsically and intricately linked. The contributing authors share a passionate interest in the development and well-being of children, in particular through

their use of imagination and adaptation of the everyday into play and stories. Following these principles, the volume explores the connections between play, story, and pretense with regard to many cultural and contextual factors that influence the way these elements vary in children's lives. In a departure from earlier collections on play and story, the authors take a particular focus on normative as compared with atypical development. This collection begins with an approach to understanding the developmental relationship between play and story, which recognizes their similarities while acknowledging their differences. Much of the collection addresses pretend play and story in children with autism spectrum disorder, an understudied but important group for consideration, as these dimensions of their lives and development have often been considered problematic. The volume also includes sections on play and story in classroom settings and play and story across cultures, including non-English-speaking environments such as Israel,

Romania, China, and Mexico. It concludes with a discussion of how play differs across sociocultural and economic contexts, making a unifying claim for the importance of play in children's lives but also calling for an understanding of what play means to very different groups of children.
