CRC Press

The new edition of Dermatological Signs of Systemic Disease helps you identify a full range of common and rare systemic diseases early on so they can be managed as effectively as possible. Formerly titled Dermatological Signs of Internal Disease, it takes an evidence-based approach to diagnosis and treatment, offering dependable clinical recommendations that enable you to attain definitive diagnoses of internal diseases that manifest on the skin. Allows you to attain definitive diagnoses of internal diseases that manifest on the skin. Uses a consistent, user-friendly format for easy reference. Covers hot topics such as lupus erythematosus, dermatomyositis, autoimmune diseases, eosinophilic and neutrophilic dermatoses, and psoriasis therapies and co-morbidities. Highlights newer therapies and treatment options for most diseases. Includes over 500 full-color illustrations - 200 new to this edition - that provide the best possible representations of diseases as they

appear in the clinic. Features more viewpoints from an expanded team of nationally recognized experts in their respective fields. Illustrated Synopsis of Dermatology & Sexually Transmitted Diseases Saunders Now in its fourth edition, this best-selling book is fully updated to address the ever increasing demands on healthcare professionals to deliver high-quality patient care. A multitude of factors impinge on healthcare delivery today, including an ageing population, more sophisticated medicines, high patient expectation and changing health service infrastructure. Time demands on primary care doctors have caused other models of service delivery to be adopted across the world, leading to ongoing changes in the traditional boundaries of care between doctors, nurses, and pharmacists. Certain medical tasks are now being performed by nurses and pharmacists, for example prescribing. Healthcare policies to encourage patients to manage their own health have led to more medicines becoming available over the counter, allowing community pharmacists to manage and treat a wide range of conditions. Further deregulation of medicines to treat acute illness from different therapeutic areas seems likely. Government policy now encourages chronic disease management as a

self-care activity, and could well be the largest area for future growth of reclassification of medicines. Pharmacists, now more than ever before, need to be able to recognise the signs and symptoms, and use an evidence-based approach to treatment. Community Pharmacy is intended for all non-medical prescribers but especially for pharmacists, from undergraduate students to experienced practitioners. Key features
