Customizable CD-ROM included Your copy of The Clinical Documentation Improvement Specialist's Handbook includes a CD-ROM loaded with all of the working tools you'll find in the book. Among them Health Information Management Hcpro, a Division of Blr Health Information Technology Basics gives

your students an introduction to the fundamental concepts of the health information technology profession. Perfect for introductory courses where core material in the health information profession is being introduced, this book is written for associate degree level HIT programs at technical, community, or career colleges. The text begins with an introduction to the U.S. health care system and explores career

opportunities within the health information profession. The health record is dissected and its many components are carefully reviewed. The book also examines various formats of the medical record and analyzes the advantage and disadvantages of the EHR. Finally, the text covers medical terminologies and classification systems and outlines the basics of reimbursement systems. Features: Each chapter begins with learning objectives and key terms to give the reader a synopsis of what he/she should expect to learn. Additional resources are listed at the end of each chapter for further exploration of the information covered in the chapter. A glossary is included for quick reference of main terms presented throughout the text. An accompanying Instructor's Manual provides review exercises which recap the important points as well as lab assignments that allow students to apply the information in a practical setting.

A Practical Guide for Education and Practice
HC Pro, Inc. This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the

purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined

scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to

determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple

internal and external independent reviews.
