Clinical Microbiology - an overview | ScienceDirect Topics

A urine sample is collected and cultured quantitatively.

Within 24 h, the clinical microbiology laboratory reports the species and quantity of bacteria found in the urine. 1 – 2 days later, the laboratory reports the susceptibility of that patient's bacterial isolate to a panel of antibiotics approved to treat urinary tract infections.

Department of Microbiology - Clinical Laboratory Manual ...

H. D. Isenberg, ASM Press, Washington, DC, 1998. When faced with the prospect of reviewing a technical manual which extends to over 800 pages,

the usual feeling is one of dread.

The authors reported an equivalent performance of the media after 24 h of incubation but a slightly higher sensitivity for MRSA ID after 48 h. However, in this multicenter study,

a high proportion of strains isolated in one laboratory in Vienna required 48 h of incubation to generate coloured colonies on either medium.
