This book is a question book
that offers single best answers
(SBA) to 300 questions related
to topics in general medicine.

In order to further enhance
knowledge and understanding,
detailed answers have been
included. This book is designed
as both a revision and learning
aid, with questions being set in
a mock-examination format which
can be completed under timed
conditions. The primary target
audience of this book is
clinical medical students who
are revising for examinations.
However, questions have been
planned in a way that a fairly
large secondary target audience
will be reached as well. This
includes students who are
transitioning from pre-clinical
to clinical. As recently

qualified medical graduates who have had the option of both online and book-based questions, the authors feel that students often prefer a Single Best Answers book that aids them in advancing their medical knowledge rather than online question banks, which can often have very repetitive and one-dimensional questions. Having questions in paper format replicates examination conditions better than online question banks and, therefore, offers a more realistic revision experience. In addition, though SBAs are becoming increasingly more common as an examination style with medical schools, there are very few SBA question books available. As such, medical students will find this book highly useful in the preparation for their examinations.
