Preventing Medication Errors is the newest volume in the series. Responding to the key messages in earlier volumes of the series â € "To Err Is Human (2000), Crossing the Quality Chasm (2001), and Patient Safety (2004) â € "this book sets forth an agenda for improving the safety of medication use. It begins by providing an overview of the system for drug

development, regulation, distribution, and use. Preventing Medication Errors also examines the peer-reviewed literature on the incidence and the cost of medication errors and the effectiveness of error prevention strategies. Presenting data that will foster the reduction of medication errors, the book provides action agendas detailing the measures needed to improve the safety of medication use in both the short- and long-term. Patients, primary health care providers, health care organizations, purchasers of group health care, legislators, and those affiliated with providing medications and medication-related products and services will benefit from this guide to reducing medication errors. The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care

reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the

health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Jones & Bartlett Publishers Designated a Doody's Core Title! The Preeminent Nursing Terminology Classification System "The Clinical Care Classification (CCC) System described in this manual is the only standard coded nursing terminology that is based on sound research using the nursing process model framework and that meets the Patient Medical Record Information (PMRI) comparability requirement. The CCC System allows patient care data generated by nurses to be incorporated

into the PMRI database, and Coding Solutions-Alternative enables nurses' contributions to patient outcomes to be studied and acknowledged."

TESTIMONIES:
"ABC Coding Solutions-Alternative Link developed ABC codes for nursing in collaboration with Dr. Virginia Saba, developer of the CCC system.

Approximately two hundred ABC codes were developed from the CCC System of Nursing Interventions to accurately document nursing and integrative health care processes, classify and track clinical care, and develop evidence-based practice models, thus filling significant gaps in older medical code sets." --Connie Koshewa, Practitioner Relations Director, ABC

Link "The International Classification for Nursing Practice (ICNPÆ) is a program of the International Council of Nurses (ICN).

One of the first steps in the development of the ICNPÆ was to collect and compare all the nursing concepts in existing nursing terminologies, including the CCC. To facilitate the goal of ICNPÆ as a unified nursing language system, a project is under way to map the CCC to the ICNPÆ Version 1.0. This work will facilitate evaluation and ongoing development of both terminologies and allow ICN to compare data using CCC codes with data from other standard nursing terminologies." --Amy Coenen, PhD, RN, FAAN, Director, ICNPÆ Program, International Council of

Major Depressive Disorder (MDD) is a clinically and neurobiologically highly heterogeneous mood disorder that consists of a variety of symptom clusters including mood symptoms, physical symptoms, and cognitive symptoms. While the traditional model of depression implicates mood as the primary symptom cluster, a more recently published conceptual understanding of depression has extended to also include cognitive symptoms. Moreover, the understanding of the central role of cognitive processes in emotion processing, social interaction, and pure cognitive performance has led to a model suggestion that places cognitive processing central to the

pathophysiology of depression. Cognitive dimensions of depression have long been implicated in the nature of depression that are characterised typically by impaired cognitive and emotional processes. In the following volume the dimensions of cognitive function, emotion processing, and social cognitive processing are highlighted to comprehensively describe large parts of the clinical symptoms as well as the pathophysiology and biology of the brain-based disorder of depression. The focus on the above cognitive and emotional dimensions of depression offers extended and novel diagnostic and treatment approaches ranging from pharmacological to psychological interventions

targeting those dimensions of and allied health depression. This volume informs about some of the more fundamental psychological, biological and clinical concepts that are applicable to the comprehensive treatment of depression and is suitable for students, trainees, clinicians and scientists in the fields of psychology, neuropsychology, psychiatry, cognitive neuroscience, neurology, general medicine / general practice and other health care professionals as it will also cover core knowledge and skills for training as well as practice.
