Continence Management, First Edition, is one of three volumes in the series that follows the Curriculum Blueprint designed by the Wound, Ostomy and Continence Nurses Society (WOCN). It is the ideal reference for anyone seeking certification as a wound, ostomy, or continence nurse, as well as anyone who manages patients with urinary or fecal incontinence, as well as

bowel dysfunction. Fast Facts for Wound Care Nursing, Second Edition Springer Publishing Company Increasingly, wound management is recognised as a specialised area of practice. Advances in wound-care products, surgical interventions, and social-support options create an often bewildering array of knowledge for healthcare practitioners. This textbook opens with a focus on the core elements of effective wound management: an understanding of how wounds heal and what inhibits wound healing, rigorous assessment, use of outcome

measures, evidence-based approaches to practice, and an understanding of how clinical research is done. Key aspects of wound-bed preparation and management - diagnostic investigations, assessment and management of non-viable tissue, infected wounds, dressings and technology, pharmacological therapy, and acute wounds – are then elucidated. Optimal management of commonly-encountered wounds (venous leg ulceration, arterial and mixed arterial-venous ulceration, inflammatory ulcers, pressure injury, and the high-risk foot)

and unusual wounds is described. The path to professionalisation of wound management in Australia is charted. The book ends with a list of wound care products (types, properties, uses, distributor-contact details). The editors of and specialist contributors to this text have aimed to build on the foundations provided by the numerous basic, introductory-level textbooks in the field to provide an authoritative, comprehensive, and up-to-date textbook for wound managers who wish to further develop their knowledge and skills. Wounds have existed since the beginning of time, and

records of their nature and treatment are found in the earliest documents. Interestingly, many of these treatments are now being rediscovered or re-used in modern-day clinical practice. In addition to the diverse nature of treatments that have been suggested as being beneficial for wounds, over many centuries there has been a range of clinicians who have cared for patients with wounds, and in many parts of the world today it is not doctors but other professional colleagues - e. g. nurses or

podiatrists - who are the most knowledgeable persons on wounds and wound treatments. Finally, the nature of wounds seen in clinical practice is changing. Increasing destructive power is resulting in more severe injuries occurring in patients involved in conflict. Developments in surgical techniques have enabled new surgical procedures to be offered to patients, but novel and more severe complications can result from such technical advances. In addition, many societies around the world

are having to deal with an increasing ageing population, and huge increases in the number of patients suffering from chronic wounds are being seen. In summary, expanding treatment options, diverse groups of clinicians caring for patients and changes in the nature of wounds seen in clinical practice are real issues that have to be faced, and solutions have to be found if patients are to receive optimal care for their wounds.
