Tony Willard has been--amongst many other things in motor publishing motoring correspondent of the Birmingham Evening Mail and Editor of Automotive Management (now called AM)--the best read trade paper for the motor retail trade. There are now stacks of ways to buy cars in the UK. So many that it is really hard for consumers to know where to get best choice, best value, best service, best after-care, best credit or whatever it is that they prioritise. In addition to franchised dealers there are: manufacturers selling direct to the public; rental car companies doing the same; car-buying agents; car supermarkets; used car dealers; internet traders; importers; auctions; and personal shoppers. Most car buying guides concentrate on WHAT to buy whether it be new or used. This book covers that, but assumes the buyer knows roughly what he wants. What has been missing until now is a guide through the jungle of places and prices which tells you WHERE to buy and HOW to pay not a penny more than necessary.

A Sarong for Clio testifies to an ongoing intellectual dialogue between its ten contributors and Craig J. Reynolds, who inspired these essays. Conceived as a tribute to an innovative scholar, dedicated teacher, and generous colleague, it is this volume's ambition to make a concerted intervention on Thai historiography—and Thai studies more generally—by pursuing in new directions ideas that figure prominently in Reynolds's scholarship. The writings gathered here revolve around two prominent themes in Reynolds's scholarship: the nexus of historiography and power, and Thai political and business cultures—often so intertwined as to be difficult to separate. The chapters examine different types of historical texts, Thai political discourse and political culture, and the media production of consumer culture. Contributors: Chris Baker; Patrick Jory, University of Queensland, Brisbane; Tamara Loos, Cornell University; Yoshinori Nishizaki, National University of Singapore; James Ockey, University of Canterbury; Maurizio Peleggi, National University of Singapore; Pasuk Phongpaichit, Chulalongkorn University, Bangkok; Kasian Tejapir, Thammasat University, Bangkok; Villa Vilaithong, Chulalongkorn University, Bangkok; Thongchai Winichakul, University of Wisconsin–Madison

Saab 9000 (4-cylinder) ABC-CLIO

An exploration of German World War II small-scale military strategy, edited by the former chief historian of the U.S. Marines. While small wars are not new, how they should be fought by a modern industrial nation is still very much a matter for debate. It is thus worth paying heed now to the experiences of another power which once encountered the same problems. This pocket manual examines German analysis of the problem, covering experiences from the Napoleonic era to the Third Reich, based upon the historical analysis, Kleinkrieg, provided to the German High Command by Arthur Ehrhardt in 1935 (republished in 1942 and 1944), and the Bandenbekämpfung (Fighting the Guerrilla Bands) document provided to Germany's OKW in 1944. In both, conditions that were specific to broader military operations were separated from circumstances in occupation campaigns, and the new background in the German experience in suppressing rebellion during the Second World War is presented. Avoiding ideological biases, this manual examines the purely military problem as seen by

professionals. Rediscovered and presented in English, these German thoughts on how best to fight small wars have been edited and annotated by Charles D. Melson, former chief historian for the U.S. Marine Corps. "The German attitude to guerrilla war was far more complex than stereotypical brutality for the sake of brutality." —Stephen G. Fritz, PhD, author of *Ostkrieg* "A highly accessible introduction to an important, but frequently neglected, aspect of German military history as well for those interested in guerrilla warfare." —Bruce I. Gudmundsson, PhD, U.S. Marine Corps University, author of *On Artillery*

Whitaker's Books in Print ABC-CLIO

This practical and holistic approach to offering library resources and services to online patrons addresses multiple areas of service to online patrons, including reference, instruction, access, and marketing. Academic libraries are wonderful resources for university students and faculty on campus, and public libraries thrive on providing targeted in-person services such as storytime, makerspaces, and adult programming. It can be easy, however, to forget about the large population of students, faculty, and community members who access library resources and use library services remotely. *Library Services for Online Patrons* reaches out to patrons who are not—or not always—located on campus or who seldom—if ever—visit libraries' physical facilities and who may not be aware of or able to equitably use library services. The authors focus on ways to organize library resources using principles of design and to cater library services to the specific needs of online students, faculty, and community members. They also address how to effectively target marketing to the online population and how to collaborate with campus and community stakeholders who work directly with them. Provides novel services and resources that will save librarians already serving online patrons time and energy Offers a broad, practical perspective to help novice librarians make initial connections with online learners Emphasizes the importance of identifying other institutional players in online education in order to effectively implement and market improvements Enhances understanding of the importance of universal design and how to assess possibilities for improvement in online services

The Second Machine Age: Work, Progress, and Prosperity in a Time of Brilliant Technologies ABC-CLIO

Based on the popular Artech House classic, *Digital Communication Systems* Engineering with Software-Defined Radio, this book provides a practical approach to quickly learning the software-defined radio (SDR) concepts needed for work in the field. This up-to-date volume guides readers on how to quickly prototype wireless designs using SDR for real-world testing and experimentation. This book explores advanced wireless communication techniques such as OFDM, LTE, WLA, and hardware targeting. Readers will gain an understanding of the core concepts behind wireless hardware, such as the radio frequency front-end, analog-to-digital and digital-to-analog converters, as well as various processing technologies. Moreover, this volume includes chapters on timing estimation, matched filtering, frame synchronization message decoding, and source coding. The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided. The book concludes with coverage of the WLAN toolbox with OFDM beacon reception and the LTE toolbox with downlink reception. Multiple case studies are provided throughout the book. Both MATLAB and Simulink source code are included to assist readers with their projects in the field.
