In 1969 Gerhard Kubik chanced to encounter a Mozambican labor migrant, a miner in Transvaal, South Africa, tapping a cipendani, a

mouth-resonated musical bow. A comparable instrument was seen in the hands of a white Appalachian musician who claimed it as part of his own cultural heritage. Through connections like these Kubik realized that the link between these two far-flung musicians is African-American music, the sound that became the blues. Such discoveries reveal a narrative of music evolution for Kubik, a cultural anthropologist and ethnomusicologist. Traveling in Africa, Brazil, Venezuela, and the United States, he spent forty years in the field gathering the material for Africa and the Blues. In this book, Kubik relentlessly traces the remote genealogies of African cultural music through eighteen African nations, especially in the Western and Central Sudanic Belt. Included is a comprehensive map of this cradle of the blues, along with 31 photographs gathered in his fieldwork. The author also adds clear musical notations and descriptions of both African and African American traditions and practices and calls into question the many assumptions about which elements of the blues were "European" in origin and about which came from Africa. Unique to this book is Kubik's insight into the ways present-day African musicians have adopted and enlivened the blues with their own traditions. With scholarly care but with an ease for the general reader, Kubik proposes an entirely new theory on blue notes and their origins. Tracing what musical traits came from Africa and what mutations and mergers occurred in the Americas, he shows that the African American tradition we call the blues is truly a musical phenomenon belonging to the African cultural world.

Face perception is a highly evolved visual skills in humans. This complex ability develops across the life-span, steeply rising in infancy, refining across childhood and adolescence, reaching highest levels in adulthood and declining in old age. As such, the development of face perception comprises multiple skills, including sensory (e.g., mechanisms of holistic, configural and featural perception), cognitive (e.g., memory, processing speed, attentional control), and also emotional and social (e.g., reading and interpreting facial expression) domains. Whereas our understanding of specific functional domains involved in face perception is growing, there is further pressing demand for a multidisciplinary approach toward a more integrated view, describing how face perception ability relates to and develops with other domains of sensory and cognitive functioning. In this research topic we bring together a collection of papers that provide a shot of the current state of the art of theorizing and investigating face perception from the perspective of multiple ability domains. We would like to thank all authors for their valuable contributions that advanced our understanding of face and emotion perception across development.

This newest programming guide by bestselling author Jesse Liberty isn’t your typical Visual Basic book. It’s not a primer on the language, and it won’t dull your brain with arguments hyping .NET either. Its goal, rather, is to make you immediately productive, creating Windows and Web applications using Visual Basic 2005 and Visual Studio 2005. Written for VB6 and novice programmers, the book shows how Visual Basic 2005 can be used to rapidly build modern Windows and web applications. What makes this book different is what’s not included. There’s no introduction to Visual Basic, no explanation of how it fits into the .NET world. Why waste time reading about something you’ll learn for yourself as soon as you start creating applications? You won’t even write a “Hello World” program. With *Programming Visual Basic 2005* you’ll get started building something meaningful, right away. The book is divided into three parts--Building Windows Applications, Building Web Applications, and Programming with Visual Basic--each of which could be a book on its own. The author shares his thorough understanding of the subject matter through lucid explanations and intelligently designed lessons that guide you to increasing levels of expertise. By the time you’ve finished the book, you’ll know how to program both Windows and web applications with VB 2005. The support for this book extends beyond its covers. Jesse offers a FAQ, Errata, complete source code and a link to a free private support discussion center on his web site: LibertyAssociates.com - just click on books.
