Having fully operating windows in your car or van is crucial for safety reasons. The mechanisms that allow you to raise and lower your windows, whether operated manually or electrically, are called window regulators. Manual window regulators operate by means of hand cranks, and electric windows are operated by buttons which control a motor.

Power windows have become so common that by 2008, some automakers eliminated hand crank windows from all their models. So many vehicles now have power windows that some people no longer understand the (formerly) common sign from another driver of using their hand to simulate moving a window crank to indicate that they wish to speak with someone when stopped at a light or in a parking lot.

This is a fairly common problem with modern coupes, where the windows automatically open and close an inch or so each time you open the door. Pull It Up. If the fuse looks OK — or if you have a manual crank window that won't go up — and you need to get the window closed, most of the time you can pull a power window up with your hands.
