The 2014 CLSI guidelines

retained the current MICs for cefazolin against enterobacteriaceae, but specified that susceptible results were based on a dosing regimen of 2 grams intravenously every 8 h and is specific for non-urine isolates. One of the major changes included in these guidelines involves the reporting of a urine-specific cefazolin MIC for enterobacteriaceae (susceptible 16 mcg/mL). *Clsi Guidelines 2014 | browserquest.mozilla* EUCAST SOPs (follow link).
