War related separations challenge military families in many ways. The worry and uncertainty associated with absent family members exacerbates the challenges of personal, social, and economic resources on the home front. U.S. military operations in Iraq and Afghanistan have sent a million service personnel from the U.S. alone into

conflict areas leaving millions of spouses, children and others in stressful circumstances. This is not a new situation for military families, but it has taken a toll of magnified proportions in recent times. In addition, medical advances have prolonged the life of those who might have died of injuries. As a result, more families are caring for those who have experienced amputation, traumatic brain injury, and profound psychological wounds. The Department of Defence has launched unprecedented efforts to support service members and families before, during, and after deployment in all locations of the country as well as in remote locations. Stress in U.S. Military Families brings together an interdisciplinary group of experts from the military to the medical to examine the issues of this critical problem. Its goal is to review the factors that contribute to stress in military families and to point toward strategies and policies that can help. Covering the major topics of parenting, marital functioning, and the stress of medical care, and including a special chapter on single service members, it serves as a comprehensive guide for those who will intervene in these problems and for those undertaking their research.

Young and beautiful, Lois Pryce was a rising star at the BBC. Unbeknownst to her co-workers, Lois lived a parallel life as a biker babe with an overwhelming sense of wanderlust. So she packed in her career to ride her motorcycle on her own from the northernmost tip of Alaska to the southernmost tip of South America. Alone. Armed only with the Spanish words for 'caution' and 'cheese', Lois was rather under-prepared for multiple bear sightings, bribing her way through borders, spending a night in a Mexican brothel and crashing her bike in the wilds of Patagonia. She most certainly got the adventure she craved, and her pulse-pounding, soul-searching adventure has already attracted fans worldwide - a weblog that she kept whilst on her travels was receiving more than two-thousand hits a day. Her hilarious, brilliantly written travelog will appeal to

anyone who's ever dreamt of jacking-it-all-in and running away to see the world.

As this book explains, the Japanese did not suddenly become proficient in the design and development of motorcycles when they first appeared in Europe at the end of the 1950s. Instead, the Japanese had been involved with motorcycles since the beginning of the 20th century. True, early Japanese motorcycles copied Western design - a trend that continued for several years after WWII. But soon they designed a succession of highly innovative machinery, not only to the Grand Prix world's benefit but to the paying 'over-the-counter' customer, too. Honda, Kawasaki, Suzuki, and Yamaha, plus Bridgestone and Tohatsu, have all built and sold racing motorcycles which the public could also buy and enjoy.
