Motorbooks International  
Americans think of the  
Korean War as death and  
hardship in the bitter hills  
of Korea. It was certainly  
this, and for those who  
fought this is what they  
generally saw. Yet every  
foot of the struggles  
forward, every step of the  
retreats, the  
overwhelming victories,  
the withdrawals and last  
ditch stands had their  
seagoing support and  
overtones. The  
spectacular ones  
depended wholly on  
amphibious power -- the  
capability of the twentieth  
century scientific Navy to  
overwhelm land-bound  
forces at the point of  
contact. Yet the all

pervading influence of the  
sea was present even  
when no major landing or  
retirement or  
reinforcement highlighted  
its effect. When navies  
clash in gigantic battle or  
hurl troops ashore under  
irresistible concentration of  
ship-borne guns and  
planes, nations  
understand that sea power  
is working. It is not so  
easy to understand that  
this tremendous force may  
effect its will silently,  
steadily, irresistibly even  
though no battles occur.  
No clearer example exists  
of this truth in wars dark  
record than in Korea.  
Communist-controlled  
North Korea had slight  
power at sea except for  
Soviet mines. So beyond  
this strong underwater  
phase the United States  
Navy and allies had little  
opposition on the water. It  
is, therefore, easy to fail to

recognize the decisive role navies played in this war fought without large naval battles.

The brand with the crown is recognized worldwide as an invaluable sports implement and luxury product. In little more than one hundred years, it has become one of the most successful and innovative watch brands on the planet. Rolex manufactures more than a half a million wristwatches per year while maintaining an outstanding reputation and near-perfect quality. From the beginning, the sponsorship of statesmen, movie stars, and athletes has driven its success, but the company has expanded to include more than just the rich and famous. The Rolex Oyster became the first watch to defy the elements when, in 1927, Mercedes Gleitze wore one while she swam the English Channel. In 1933, the company patented the first automatic winding mechanism. Learn more about this history and read updated reports written about new Rolex ideas and performance tests featured in the German watch magazine Armbanduhren (Wristwatch) from the past 15 years. This comprehensive resource provides readers with the tools necessary to perform analysis of

various waveforms for use in radar systems. It provides information about how to produce synthetic aperture (SAR) images by giving a tomographic formulation and implementation for SAR imaging. Tracking filter fundamentals, and each parameter associated with the filter and how each affects tracking performance are also presented. Various radar cross section measurement techniques are covered, along with waveform selection analysis through the study of the ambiguity function for each particular waveform from simple linear frequency modulation (LFM) waveforms to more complicated coded waveforms. The text includes the Python tool suite, which allows the reader to analyze and predict radar performance for various scenarios and applications. Also provided are MATLAB® scripts corresponding to the Python tools. The software includes a user-friendly graphical user interface (GUI) that provides visualizations of the concepts being covered. Users have full access to both the Python and MATLAB source code to modify for their application. With examples using the tool suite are given at the end of each chapter, this text gives readers a clear understanding of how important target scattering is in areas of target detection, target tracking, pulse integration, and target discrimination.

Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as:

- physical principles of various material handling systems;
- considerations in selecting technically efficient and environmentally friendly equipment;
- best practices in upgrading and optimizing existing bulk material handling facilities;
- strategies to select proper equipment in the early phases of a new project.

Filled with graphs, charts, and case

studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.

From Sir John Franklin's doomed 1845 search for the Northwest Passage to early twentieth-century sprints to the South Pole, polar expeditions produced an extravagant archive of documents that are as varied as they are engaging. As the polar ice sheets melt, fragments of this archive are newly emergent. In *The News at the Ends of the Earth* Hester Blum examines the rich, offbeat collection of printed ephemera created by polar explorers. Ranging from ship newspapers and messages left in bottles to menus and playbills, polar writing reveals the seamen wrestling with questions of time, space, community, and the environment. Whether chronicling weather patterns or satirically reporting on penguin mischief, this writing provided expedition members with a set of practices to help them survive the perpetual darkness and harshness of polar winters. The extreme

Polar exploration writing,  
Blum contends, offers
