Organizational Simulation CRC Press Nationalism, nation-building and 'defensive modernisation' were the main themes of the 'cultural revolution' underpinning the totalitarian and secular regimes of Ataturk and Reza Shah which replaced the traditional Qajar state of Iran and the long-

declining Ottoman Empire. The authors trace the emergence of Ataturk and Reza Shah through the constitutional revolutions in Iran and the Ottoman Empire and the introduction of European social models, the establishment of dictatorship and of secularist reforms resulting in both cases in totalitarian, nationalist, and quasi-westernised states, and the personality cult of the leader. The legacy of both was a chasm between the elite and the masses and provided the seeding of an Islamic mass-movement.

Research on the frontiers of urban studies was the subject of a conference on nineteenth-century cities held in November 1968 at Yale University. These papers from the conference attempt to define what is coming to be known

as the "new urban history." The cities studied range from small communities - such as Springfield, Massachusetts, and Poughkeepsie, New York - to giants like Philadelphia, Chicago, and Boston. While the majority of the contributions deal with American cities, four essays examine cities in Canada, England, France, and Colombia. The studies focus on the dimensions of mobility and stability in the social structure of nineteenth-century cities. Within this general frame, the essays explore such areas as urban patterns of class stratification, changing rates of occupational and residential mobility, social origins of particular elite groups, the relations between political control and social class, differences in opportunities for various ethnic groups, and the relationships between family structure and city life. In all these fields, the authors relate sociological theory to the historical materials; a complex yet readable,

interdisciplinary portrait of the origins of modern city life is the result.
