Japan's Motorcycle Wars Prentice Hall

This is the story of a one-day bicycle ride taken by an eighty-year-old man along the Southern California Beach bike path for a twenty-four-mile round trip. As he stops to meet people and observe events, he is reminded of similar people, places, and events from his past. These memories comprise a series of vignettes filled with historical facts, humor, pathos, and nostalgia. From early childhood memories through school crushes and a myriad of his and others experiences, the book tells short stories that are at times humorous, sometimes profound, and always memorable. Historical moments taken from World War II and the Korean Conflict are retold alongside personal adventures, with such things as horse and motorcycle ownership, creating a captivating juxtaposition of serious and humorous events. The view presented in this book gives a unique look into the mind of an older person who has lived a full and memorable life.

Data Structures and Abstractions with Java is suitable for one- or two-

semester courses in data structures (CS-2) in the departments of Computer Science, Computer Engineering, Business, and Management Information Systems. This book is also useful for programmers and software engineers interested in learning more about data structures and abstractions. This is the most student-friendly data structures text available that introduces ADTs in individual, brief chapters -- each with pedagogical tools to help students master each concept. Using the latest features of Java, this unique object-oriented presentation makes a clear distinction between specification and implementation to simplify learning, while providing maximum classroom flexibility. Teaching and Learning Experience This book will provide a better teaching and learning experience--for you and your students. It will help: Aid comprehension and facilitate teaching with an approachable format and content organization: Material is organized into small segments that focus a reader's attention and provide greater instructional flexibility. Support learning with student-friendly pedagogy: In-text and online features help students master the material. Black Lung Program Manual Editora Blucher

Gifted students can exhibit extreme variance in both their abilities and their interests, yet they are often treated within schools as one homogeneous, specialized population. Personalized Learning in Gifted Education helps educators strengthen their differentiation of both instruction and services for advanced students. This book: • helps educators develop the specific gifts and talents of the gifted students they serve • includes a year-long plan for professional learning communities seeking to transform their programs • demonstrates how educators can utilize the wealth of data they have at their disposal • provides a rationale and blueprint for a stronger, more personalized approach to gifted education • offers suggestions for both elementary and secondary schools. Recommendations center around five features of personalized learning: personalized learning plans, project- or problem-based learning, competency-based progression through the curriculum, criterion-referenced assessments, and multi-year mentoring.

For decades the crown jewels of Japan's postwar manufacturing industry, motorcycles remain one of Japan's top exports. Japan's Motorcycle Wars assesses the historical development and societal impact of the motorcycle industry, from the influence of motor sports on vehicle sales in the early 1900s to the postwar developments that led to the massive wave of motorization sweeping the Asia-Pacific region today. Jeffrey Alexander brings a wealth of information to light, providing English translations of transcripts, industry publications, and company histories that have until now been available only in Japanese. By exploring the industry as a whole, he reveals that Japan's motorcycle industry was characterized not by communitarian success but by misplaced loyalties, technical disasters, and brutal competition.

In this text, Dr. Chiang introduces students to the most important methods of dynamic optimization used in economics. The classical calculus of variations, optimal control theory, and dynamic programming in its discrete form are explained in the usual Chiang fashion, with patience and thoroughness. The economic examples, selected from both classical and recent literature, serve not only to illustrate applications of the mathematical methods, but also to provide a useful glimpse of the development of thinking in several areas of economics.
