The 2010 Medicare Handbook has been updated to include coverage of: Re-bidding under the competitive bidding for Durable Medical Equipment, Prosthetics, Orthotics, and

Supplies (DMEPOS) as re-introduced in the fall of 2009 Understanding the strengths and weaknesses of the variety of SNPs available under the Medicare Advantage program (Medicare Part C) Continued efforts on educating beneficiaries about their rights, particularly with respect to moving from one care setting to another Developments in the Medicare Hospice Care Benefit, including in-the-home hospice care as opposed to hospice in a skilled nursing facility Ongoing problems with the implementation of the Medicare Part D prescription drug benefit, including providing good information about how to appeal the denial of coverage of drugs not on a plan's formulary Condition Codes 44 and W2 Training Handbook Elsevier For more than a generation haemodialysis has been the principal method of treating patients with both acute and chronic renal failure. Initially, developments and improvements in the system were highly technical and relevant to only a relatively small number of specialists in nephrology. More recently, as advances in therapy have demonstrated the value of haemofiltration in the intensive therapy unit and haemoperfusion for certain types of poisoning, the basic principles of haemodialysis have been perceived as

important in many areas of clinical practice. In this volume, the potential advantages of bicarbonate haemo dialysis are objectively assessed, the technical and clinical aspects of both haemofiltration and haemoperfusion discussed and the continuing problems associated with such extracorporeal circuits analysed. All the chapters have been written by recognized experts in their field. The increasing availability of highly technical facilities for appropriately selected patients should ensure that the information contained in the book is relevant not only to nephrologists but to all practising clinicians. ABOUT THE EDITOR Dr Graeme R. D. Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician/Nephrologist to the Grampian Health Board. More than ever, there is a need to understand music infringement issues within the context of copyright litigation. In *Music and Copyright*, Ron Rosen provides readers with a practical and strategic roadmap to the music-infringement litigation process, beginning with the client's claim or defense and continuing through the selection and use of experts, discovery, motion practice, and trial." Regional health care databases are being established around the country with the goal of providing timely and useful information to policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and appropriate use of health care data. Based on experience with databases now in operation and in development, *Health Data in the Information Age* provides a clear set of guidelines and principles for exploiting the potential benefits of aggregated health data--without jeopardizing confidentiality. A panel of experts identifies characteristics of emerging health database organizations (HDOs). The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse groups from researchers to health care administrators might use aggregated data. *Health Data in the Information Age* offers frank analysis and guidelines that will be invaluable to anyone interested in the operation of health care databases.
