In the United States, homeownership is synonymous with economic security and middle-class status. It has played this role in American life for almost a century, and as a result, homeownership's centrality to Americans' economic lives has come to seem natural and inevitable. But this state of affairs did not develop spontaneously or inexorably. On the contrary, it was the product of federal

government policies, established during the 1930s and developed over the course of the twentieth century. At the Boundaries of Homeownership traces how the government's role in this became submerged from public view and how several groups who were locked out of homeownership came to recognize and reveal the role of the government. Through organizing and activism, these boundary groups transformed laws and private practices governing determinations of credit-worthiness. This book describes the important policy consequences of their achievements and the implications for how we understand American statebuilding.

Due to a worldwide need for lower cost drug therapy, use of generic and multi-source drug products have been increasing. To meet international patent and trade agreements, the development and sale of these products must conform to national and international laws, and generic products must prove that they are of the same quality and are therapeutically equivalent to the brand name alternative. However, many countries have limited resources to inspect and verify the quality of all drug products for sale in their country. This title discusses the worldwide legislative and regulatory requirements for the registration of generic and multi-source drug products.

Pres. Franklin D. Roosevelt declared a bank holiday on March 5, 1933, closing banks across the country until they proved financial soundness. Meanwhile, as the United States crawled out of the Great Depression, Jesse H. Mitchell and a group of black businessmen accomplished the extraordinary--they started a black-owned bank on a street known as "Black Broadway" in the nation's capital. Mitchell, a Howard University-educated lawyer and realtor, and his friends sold \$65,000 in stock, and in the sweltering heat on August 20, 1934, Industrial Bank of Washington opened for business. A range of black investors rallied around the effort, from individuals, churches, and service-oriented organizations to savvy business owners. The bank has carried on for three generations: Mitchell's son B. Doyle Mitchell Sr. succeeded him as president in 1953, who was then succeeded in 1993 by his grandson B. Doyle Mitchell Jr. as president and CEO and his granddaughter Patricia A. Mitchell as executive vice president.
