This paper presents results of the assessment of the design parameters leading to the definition of the crest level of a coastal dike along the German North Sea. Procedures to estimate the design water level have been proposed, distinguishing between comparative and single value procedures. The transformation of the wave characteristics from ...

Evaluation of design parameters for coastal & offshore ... Planning, design and operation of coastal and offshore facilities require information on environmental parameters. Since the environment is stochastic in nature, design parameters to support engineering activities need to be evaluated using probabilistic methods based on long-term site-specific data.

Methods for USACE design practice for navigation structures are described in the Coastal Engineering Manual (CEM). The design calculations use a storm of selected return periods from 10 to 100 years, associated wave heights and wave periods, storm surge, and wave setup. The combination of these design parameters is used in the calculation of rock
