9.2.3.2 The standardized mean difference. The standardized mean difference is used as a summary statistic in meta-analysis when the studies all assess the same outcome but measure it in a variety of ways (for example, all studies measure depression but they use different psychometric scales). In this circumstance it is necessary to standardize the results of the

---

studies to a uniform scale ...

9.2.3.2 The standardized mean difference -  
Cochrane

9.5.2 Identifying and measuring heterogeneity. It is important to consider to what extent the results of studies are consistent. If confidence intervals for the results of individual studies (generally depicted graphically using horizontal lines) have poor overlap, this generally indicates the presence of statistical heterogeneity.
