9.2.3.2 The standardized mean difference. The standardized mean difference is used as a summary statistic in meta-analysis when the studies all assess the same outcome but measure it in a variety of ways (for example, all studies measure depression but they use different psychometric scales). In this circumstance it is necessary to standardize the results of the studies to a uniform scale ...

analyses Editors:  
Jonathan J Deeks,  
Julian PT Higgins  
and Douglas G  
Altman on behalf of  
the Cochrane  
Statistical Methods  
Group. Key points.  
Meta-analysis is  
the statistical  
combination of  
results from two or  
more separate  
studies.

*Cochrane Handbook for  
Systematic Reviews of  
Interventions*  
9.5.2 Identifying and  
measuring  
heterogeneity. It is  
important to consider  
to what extent the  
results of studies are  
consistent. If  
confidence intervals  
for the results of  
individual studies  
(generally depicted  
graphically using  
horizontal lines) have

---

poor overlap, this generally indicates the presence of statistical heterogeneity.
