Relapse Prevention Therapy (RPT, Marlatt & Donovan, 2005) is a type of cognitive-behavioral therapy. RPT aims to limit or prevent relapses by helping the therapy participant to anticipate circumstances that are likely to provoke a relapse. You can develop strategy to cope with these high-risk situations in advance.

CBT Techniques: Tools for Cognitive Behavioral Therapy

Abstract. This review provides the rationale for implementing cognitive behavioral therapy (CBT) for the prevention of Alzheimer's disease (AD). There are known risk factors associated with the development of AD, some of which may be ameliorated with CBT. We posit that treating the risk factors of inactivity, poor diet, hyposmia and anosmia, sleep ...

Cognitive behavioral treatment for AD would involve the following: training for better olfaction, engaging the already well-developed CBT-I, engaging the already well-developed computer-assisted game-like programs to sustain cognitive skills, using exergaming to enhance activity which, in turn will stimulate CSF flow throughout the brain.

Cognitive Behavioral Therapy for Relapse Prevention

Cognitive Therapy for Suicide Prevention is a cognitive-behavioral psychotherapy program designed for patients who have previously attempted or thought of suicide. The intervention teaches patients skills to use alternative ways of thinking and behaving during episodes of suicidal crises and assists them in building a network of mental health services and social supports to prevent future suicide attempts.

The CBT therapist explains to you that your binge eating is based on emotional reasoning and, although eating might make you feel temporarily comforted, would not help you feel better about yourself. In fact, overeating was having the opposite effect and was actually making you feel worse about yourself, which would then worsen your overeating.

Cognitive Behavioral Therapy for Suicide Prevention ...

With the majority of mental health services in the US being delivered by social workers, it is imperative that knowledge and skills are in place for our work with clients with the ultimate goal being to prevent premature suicidal death. Cognitive-behavioral therapy for suicide prevention is an evidence-based intervention is a valuable and effective approach to use in practice for individuals experiencing suicidal ideation and/or whom have made an attempt.

Relapse Prevention Therapy - Mental Help

Abstract. Accumulating evidence supports the efficacy of cognitive behavioral therapy for suicide prevention (CBT-SP) as an empirically supported treatment approach for suicidal patients. In light of these findings, several procedures pulled from CBT-SP have been recommended for standard care with suicidal patients.
