SAGE Publications

"In Worldviews and Christian Education, editors W.A. Shipton, E. Coetzee, and R. Takeuchi have brought together works by experts in cross-cultural religious education. The authors and editors have a wealth of personal experience in presenting the gospel to individuals with various worldviews that differ greatly from those held by Christians who take the Bible as authoritative. They focus on the beliefs and issues associated with witnessing to seekers for truth coming from backgrounds as diverse as animism, Buddhism, Confucianism, Hinduism, Islam, Marxism, Taoism, and postmodernism." -- Back Cover

[Handbook of Medical Neuropsychology](#) Routledge

Cognitive Science provides a comprehensive introduction to the field from multiple perspectives to help readers better understand and answer questions about the mysteries of the mind. In each chapter, the authors focus on a particular area in cognitive science, exploring methodologies, theoretical perspectives, and findings, then offering the critical evaluations and conclusions drawn from them. Substantially updated with new and expanded content, the Third Edition reflects the latest research in this rapidly evolving field.

[Cognitive Behaviour Therapy for Children and Families](#) Cognitive Psychology

An updated, systematic introduction to the theoretical and experimental foundations of higher mental processes. The book constructs a coherent picture of human cognition, relating neural functions to mental processes, perception to abstraction, representation to meaning, and knowledge to skill.

[Cognitive Behavior Therapy, Second Edition](#) John Wiley & Sons

This state-of-the-art handbook provides an authoritative overview of the field of perception, with special emphasis on new developments and trends. Surveys the entire field of perception, including vision, hearing, taste, olfaction, and cutaneous sensibility. Ideal for researchers and teachers looking for succinct, state-of-the-art overviews of areas outside their speciality, and for anyone wanting to know about current research and future trends. Uses a tutorial approach that results in a balanced description of topics. A 'Selected Readings' section points to general references that provide more detailed treatments of each topic; 'Additional Topics' provide references to important topics. Written by noted authorities in the field. Now available in full text online via xreferplus, the award-winning reference library on the web from xrefer. [EEO Law and Personnel Practices](#) SAGE Publications

This text presents the basic concepts of modern cognitive psychology in a succinct and accessible manner. Empirical results, theoretical developments, and current issues are woven around basic concepts to produce coherent accounts of research areas. Barsalou's primary goal is to equip readers with a conceptual vocabulary that acquaints them with the general approach of cognitive psychology and allows them to follow more technical discussions elsewhere. In meeting this goal, he discusses the traditional work central to modern thinking and reviews current work relevant to cognitive science. Besides focusing on research and theory in cognitive psychology, Barsalou also addresses its fundamental assumptions. Because the cognitive approach to psychology is somewhat subtle, often misunderstood, and sometimes controversial, it is essential for a text on cognitive psychology to address the assumptions that underlie it. Therefore, three of the eleven chapters address the "meta- assumptions" that govern research and theory in cognitive psychology. These meta-chapters provide a deeper understanding of the content areas and a clearer vision of what cognitive psychologists are trying to accomplish. The remaining eight "content" chapters cover the central topics in cognitive psychology. This book will be of value to a variety of audiences. Ideal for researchers in computer science, linguistics, philosophy, anthropology, and neuroscience who wish to acquaint themselves with cognitive psychology, it may also be used as a text for courses in cognitive science and cognitive psychology. Lay readers who wish to learn about the cognitive approach to scientific psychology will also find the volume useful.

[Fundamentals of Cognitive Psychology](#) Cengage Learning

In this fifth edition of *A Cognitive Psychology of Mass Communication*, author Richard Jackson Harris continues his examination of how our experiences with media affect the way we acquire knowledge about the world, and how this knowledge influences our attitudes and behavior. Presenting theories from psychology and communication along with reviews of the corresponding research, this text covers a wide variety of media and media issues, ranging from the commonly discussed topics - sex, violence, advertising - to lesser-studied topics, such as values, sports, and entertainment education. The fifth and fully updated edition offers: highly accessible and engaging writing contemporary references to all types of media familiar to students substantial discussion of theories and research, including interpretations of

original research studies a balanced approach to covering the breadth and depth of the subject discussion of work from both psychology and media disciplines. The text is appropriate for Media Effects, Media & Society, and Psychology of Mass Media coursework, as it examines the effects of mass media on human cognitions, attitudes, and behaviors through empirical social science research; teaches students how to examine and evaluate mediated messages; and includes mass communication research, theory and analysis.

[Foundations of Sensation and Perception](#) Wiley

The field of perception is devoted to explaining the operation of the senses and the experiences and behaviors resulting from stimulation of the senses. Perceptual processes such as recognizing faces, seeing color, hearing music, and feeling pain represent the actions of complex mechanisms, yet we usually do them easily. The Encyclopedia of Perception presents a comprehensive overview of the field of perception through authoritative essays written by leading researchers and theoreticians in psychology, the cognitive sciences, neuroscience, and medical disciplines. It presents two parallel and interacting approaches: the psychophysical, or determining the relationship between stimuli in the environment and perception, and the physiological, or locating the biological systems responsible for perception. Are there any processes not associated with perception? Surely there are, but the pervasiveness of perception is truly impressive, and the phenomena of perception and its mechanisms are what this encyclopedia is about. Key Features Contains 16 pages of color illustration and photography to accompany the entries Offers a varied and broad list of topics, including basic research as well as methodologies, theoretical approaches, and real-world applications of perceptual research Emphasizes human perception but includes ample research because of its importance in its own right and because of what this research tells us about human perception Written by recognized experts from many disciplines but for an audience with no previous background in perception—students and members of the general public alike Key Themes Action Attention Audition Chemical Senses Cognition and Perception Computers and Perception Consciousness Disorders of Perception Illusory Perceptions Individual Differences (Human) and Comparative (Across Species; Not Including Ageing, Disorders, and Perceptual Development) Methods Perceptual Development/Experience Philosophical Approaches Physiological Processes Sense Interaction Skin and Body Senses Theoretical Approaches Visual Perception

[A History of Modern Psychology](#) Psychology Press

They are tiny. They are tall. They are gray. They are green. They survey our world with enormous glowing eyes. To conduct their shocking experiments, they creep in at night to carry humans off to their spaceships. Yet there is no evidence that they exist at all. So how could anyone believe he or she was abducted by aliens? Or want to believe it? To answer these questions, psychologist Susan Clancy interviewed and evaluated "abductees"--old and young, male and female, religious and agnostic. She listened closely to their stories--how they struggled to explain something strange in their remembered experience, how abduction seemed plausible, and how, having suspected abduction, they began to recollect it, aided by suggestion and hypnosis. Clancy argues that abductees are sane and intelligent people who have unwittingly created vivid false memories from a toxic mix of nightmares, culturally available texts (abduction reports began only after stories of extraterrestrials appeared in films and on TV), and a powerful drive for meaning that science is unable to satisfy. For them, otherworldly terror can become a transforming, even inspiring experience. "Being abducted," writes Clancy, "may be a baptism in the new religion of this millennium." This book is not only a subtle exploration of the workings of memory, but a sensitive inquiry into the nature of belief.

**Cognitive Psychology** Cengage Learning

The enhanced 4th Edition of Goodwin's series, *A History of Modern Psychology*, explores the modern history of psychology including the fundamental bases of psychology and psychology's advancements in the 20th century. Goodwin, Ph.D. in experimental psychology, has a true passion for the history of experimental psychology. Strengths of the text include his conversational writing style and attention to recent scholarship in the history of psychology. Goodwin's 4th Edition focuses on the reduction of biographical information with an emphasis on more substantial information including ideas and concepts and on ideas/research contributions; more history on the applied areas of psychology; condensed chapters, philosophical antecedents and physiological antecedents; and more psychology's history in the 20th century.

**Psychology** Cengage Learning

This second edition of the practical and well-designed *EEO Law and Personnel Practices* has been completely revised and updated in line with the latest developments in US law, including the new Americans with Disabilities Act. Arthur Gutman provides a framework for understanding all federal EEO laws by addressing the following questions: - What classes of people are protected (or, have rights)? - What business entities are covered (or, have duties)? - What employment practices are covered? - Is the law administered, and if so, how? - What are the penalties (or, remedies) for breaking the law? - What judicial scenarios are used in litigation? The author not only makes the reader aware of the laws and the applicable defenses, but also provides an understanding of the reasons underlying them. Nearly all chapters conclude with a section on compliance.
