Blockchain and artificial intelligence are perhaps the two most significant disruptive technologies this century and both will significantly rewire the world of global financial markets and the world in which we live. While blockchain offers a number of significant advantages over traditional forms of finance including lower cost and massive increases in operational efficiencies of traded markets, property records and a whole host of transaction processes, artificial intelligence is moving fast from basic structured machine learning doing menial yet important big data tasks like credit card fraud detection to predictive analysis and real-time real-world risk management and investment decision making. There is still a lot of confusion in the market about cryptocurrencies, bitcoin and the underlying blockchain technology. Blockchain and Artificial Intelligence highlights the underlying technologies of blockchain and the differences between cryptocurrencies and blockchain financial applications. It explores the current AI offerings and gives a vision of the fast-moving developments in this area including the many solutions that are expected to revolutionize the way financial and commodity markets will operate in the future.

COMPLETE GUIDE TO CAREER PLANNING Essvale Corporation Limited

In recognition of the growing importance of global labour and employment law, the Center for Labor and Employment Law at New York University School of Law dedicated its 61st Annual Conference on Labor to an in-depth examination of issues arising in this area. This volume of the proceedings of the 2008 conference contains papers presented at that meeting, all here updated to reflect recent developments, as well as additional contributions from other practitioners and academics with extensive knowledge and experience in the field. Experts from both the practicing bar and academia – twenty-seven in all – use their unique strengths to address issues worthy of concern in each juridical realm. An unusual feature of this volume in the series is its in-depth attention to comparative law in the field, with exploration of developments in China, France, and New Zealand, as well as in European Union law. As always, this annual conference captures valuable insights and syntheses of central labour and employment law issues and will be of great value to practitioners and academics in the field.

CFA Institute Career Guide India Archers & Elevators Publishing House

Career planning has become a survival skill in today's world. Choosing a Career should be by Choice and not by Chance. But HOW TO CHOOSE THE RIGHT CAREER? What are the factors one should consider while choosing a career? A Complete Guide to Career Planning is about how to decide the direction your career will take. The purpose behind writing this book is to make you conversant with the various career options that you can pursue and enable you to select the right career you most fit in. The author has meticulously

explored and mapped the cavernous paths of the globe of careers, which exist presently. The book provides a straightforward introduction to the concepts of career choices and the importance of planning. It emphasises the importance of self-exploration by empowering readers to look at themselves, their strengths and weaknesses, and their background and values, and then realistically evaluate the various opportunities in the world of career. With this comprehensive guide a student can learn how to explore career options, plan a career path, and find the right school and colleges for higher studies that will help him achieve his goals easily and convincingly. The book includes all the information you need to plan your future and take control of your career.

Human Resources Management Vault Reports Incorporated

One of America's top doctors reveals how AI will empower physicians and revolutionize patient care Medicine has become inhuman, to disastrous effect. The doctor-patient relationship--the heart of medicine--is broken: doctors are too distracted and overwhelmed to truly connect with their patients, and medical errors and misdiagnoses abound. In Deep Medicine, leading physician Eric Topol reveals how artificial intelligence can help. AI has the potential to transform everything doctors do, from notetaking and medical scans to diagnosis and treatment, greatly cutting down the cost of medicine and reducing human mortality. By freeing physicians from the tasks that interfere with human connection, AI will create space for the real healing that takes place between a doctor who can listen and a patient who needs to be heard. Innovative, provocative, and hopeful, Deep Medicine shows us how the awesome power of AI can make medicine better, for all the humans involved.

Careers in Information Technology Walter de Gruyter GmbH & Co KG

From New York Times bestselling author and senior economic correspondent at The New York Times, how to survive—and thrive—in this increasingly challenging economy. Every ambitious professional is trying to navigate a perilous global economy to do work that is lucrative and satisfying, but some find success while others struggle to get by. In an era of remarkable economic change, how should you navigate your career to increase your chances of landing not only on your feet, but ahead of those around you? In How to Win in a Winner-Take-All World, Neil Irwin, senior economic correspondent at the New York Times, delivers the essential guide to being successful in today's economy when the very notion of the "job" is shifting and the corporate landscape has become dominated by global firms. He shows that the route to success lies in cultivating the ability to bring multiple specialties together—to become a "glue person" who can ensure people with radically different technical skills work together effectively—and how a winding career path makes you better prepared for today's fast-changing world. Through original data, close analysis, and case studies, Irwin deftly explains the 21st century economic landscape and its implications for ambitious people seeking a lifetime of professional success. Using insights from global giants like Microsoft, Walmart, and Goldman Sachs, and from smaller lesser known organizations like those that make cutting-edge digital effects in Planet of the Apes movies or Jim Beam bourbon, How to Win in a Winner-Take-All World illuminates what it really takes to be on top in this world of technological complexity and global competition.

InfoWorld Taylor & Francis

There is a lot of hype, hand-waving, and ink being spilled about artificial intelligence (AI) in business. The amount of coverage of this topic in the trade press and on shareholder calls is evidence of a large change currently underway. It is awesome and terrifying. You might think of AI as a major environmental factor that is creating an evolutionary pressure that will force enterprise to evolve or perish. For those companies that do survive the "silicon wave" sweeping through the global economy, the issue becomes how to keep their humanity amidst the tumult. What started as an inquiry into how executives can adopt AI to harness the best of human and machine capabilities turned into a much more profound rumination on the future of humanity and enterprise. This is a wake-up call for business leaders across all sectors of the economy. Not only should you implement AI regardless of your industry, but once you do, you should fight to stay true to your purpose, your ethical convictions, indeed your humanity, even as our organizations continue to evolve. While not holding any punches about the dangers posed by overpowered AI, this book uniquely surveys where technology is limited, and gives reason for cautious optimism about the true opportunities that lie amidst all the disruptive change currently underway. As such, it is distinctively more optimistic than many of the competing titles on Big Technology. This compelling book weaves together business strategy and philosophy of mind, behavioral psychology and the limits of technology, leadership and law. The authors set out to identify where humans and machines can best complement one another to create an enterprise greater than the sum total of its parts: the Humachine. Combining the global business and forecasting acumen of Professor Nada R. Sanders, PhD, with the legal and philosophical insight of John D. Wood, Esq., the authors combine their strengths to bring us this profound yet accessible book. This is a "must read" for anyone interested in AI and the future of human enterprise.

How to Win in a Winner-Take-All World Basic Books

There is no industry left where artificial intelligence is not used in some capacity. The application of this technology has already stretched across a multitude of domains including law and policy; it will soon permeate areas beyond anyone's imagination. Technology giants such as Google, Apple, and Facebook are already investing their money, effort, and time toward integrating artificial intelligence. As this technology continues to develop and expand, it is critical for everyone to understand the various applications of artificial intelligence and its full potential. The Handbook of Research on Innovative Management Using AI in Industry 5.0 uncovers new and innovative features of artificial intelligence and how it can help in raising economic efficiency at both micro and macro levels and provides a deeper understanding of the relevant aspects of artificial intelligence impacting efficacy for better output. Covering topics such as consumer behavior, information technology, and personalized banking, it is an ideal resource for researchers, academicians, policymakers, business professionals, companies, and students.

InfoWorld V&S Publishers

"A highly successful organisation is built on the strengths of exceptional people. No matter how much technology and mechanisation is developed, no organisation could survive and prosper without them". --- Luszcz and Kleiner, 2001 The most important corporate resource over the next few years will be talent: smart, sophisticated business people who are technologically literate, globally astute, and operationally agile. And even as the demand for

talent goes up, the supply of it will be going down. This seems to particularly hold true in case of the IT-ITES (Information Technology and Information Technology- Enabled Services) industry in India which requires high quality and highly skilled labour force to cater to the rapidly increasing global demand for software services but is currently facing an increasing shortage of skills supply. Moreover, due to shortages of skilled workers, high turnover rates, and rapid business growth in the service sectors, it has been noted that recruiting, selecting, and placing applicants are among the top three priorities of human resource professionals. Since the IT industry in India is faced with these three challenges, recruitment and selection comprises an important human resource practice in this industry. Further, in this industry, human resources comprise both the raw material and the 'technology', and are therefore of prime importance. As India completes the transition from being an agrarian economy to being a full-fledged, first-world economy, operating at the leading edge of contemporary technology, the IT sector is emerging as major driver of the economy. The Indian IT industry comprises of domestic software and services firms as well as foreign firms looking to consolidate their presence in India owing to the increasing cost pressures in US and Europe. This has increased the need to setup in-house development centers or outsource to third-party service providers in low cost countries such as India. IT and IT enabled services include a wide range of services from back-office data entry and processing to customer contact services, corporate support functions, knowledge support functions and research and design activities. As per the latest Forbes Research, India now controls 44 per cent of the global offshore outsourcing market for software and back office services. As per Nasscom estimates, it is projected to grow to 51 per cent. If this growth is sustained, Nasscom has estimated that there will be a potential shortfall of above 2, 10,000 IT and ITES professionals in India by the year 2012 and demand will outpace the supply. Though the Indian IT industry is in a strong position to leverage this global software opportunity (as India currently has one of the world 's largest, most qualified pools of scientific and engineering manpower), this growing global demand is not only for numbers but also for appropriately skilled, industry-oriented professionals as companies are further scaling their operations and offering high value-added services which involve higher levels of technology and more specialized, higher-end services. Hence, firms which want to maintain their competitive advantage have to carefully recruit and select the most suitable out of the large pool of available manpower. Moreover, according to a recent study by McKinsey & Co., although the potential supply of talent in low wage countries such as India is large and growing rapidly, only a fraction of the job candidates could successfully work at a foreign company on account of their limited suitability i.e. though there are many candidates with the technical skills to fill a position, they may not have the cultural skills to " fit in " with the organisation. The same issue is also faced by large globally competitive domestic Indian firms who are competing for the same pool of talent and skills as their foreign counterparts to remain competitive and survive in global and domestic markets.

Up 2 Cents a Share Down 8 Million Jobs LexisNexis

The process of development in recent times has been characteristically marked by the expanding reach of multinational enterprises, flows of foreign direct investment, unprecedented growth of information and communication technologies (ICT) and knowledge-based industries, and infusion of ICT across the entire spectrum of industries and activities.

High-tech knowledge-based industries like information technology, biotechnology, pharmaceuticals and so on have played an important role in the transition of Chinese and Indian economies—the two largest and fastest growing economies. This inter-disciplinary book offers an in-depth understanding of the behaviour of firms in these industries, analysing the strategies they adopt in a globally competitive environment, the role they have played in ushering in the growth revolution in China and India, and the contribution they have made to the nature and growth of employment. This study also dwells upon the emerging nature of scientific and technological developments like nanotechnology, novel materials, spintronics and quantum computers, with the conclusion that in the future, knowledge and technology are going to be the real sources of wealth for nations.
