"The goal of this macro edition is to convey to students the ideas that make up modern economics. The ideas are both about the way the economy works, and about how to design policy to make the economy work better"--

The Economics of Health and Health Care Taylor & Francis
An upper-level text, History of Economic Thought continues to offer a lively, accessible discussion of ideas that have shaped modern economics. The Fourth Edition has been thoroughly revised to reflect recent scholarship and research, as well as a more pointed focus on modern economic thought. International Handbook on Teaching and Learning Economics Macmillan Higher Education
For undergraduate courses in Intermediate Macroeconomics and Macroeconomics for Management courses at the undergraduate or MBA levels. Designed for courses that present modern macroeconomics with a policy emphasis. The authors recognize that the economy is a complex system and that economists do not have all the answers; basic economic models do not hold true under all circumstances. The text provides students with a framework for discussing complicated questions and the tools to think about models and the economy in the way that macroeconomists and policy makers do. Theory is developed as needed to understand policy, rather than presenting theory first and then adding policy, and is presented with a minimum of technical detail. The authors present modern macroeconomic concepts and issues in a lively, accessible and entertaining style.
Chapter-opening policy problems - Discussed throughout and summarized in chapter-ending 'Policy Perspective' sections.
Meets the needs of instructors who wish to teach a policy-oriented course.
Current, real-world examples throughout - e.g., the Asian financial crises; the new economy; monetary policy and the stock market; monetary policy rules

Economists in the post-Cold War era are increasingly circumspect about universal, one-size-fits-all conceptions of human behaviour and economic institutions. Contemporary economics is thus marked by a nascent pluralism. Economic Pluralism brings these pluralist sensibilities to the fore. Its twenty original essays explore the positive potential and critical limits of pluralism in economic theory, philosophy, institutions, and policies, and education. These twenty original essays reflect the maturity and breadth of pluralist scholarship in economics today. The first eight chapters (including critical essays by Tony Lawson, Diana Strassmann et al., Frederic Lee, and David Colander) stake out contentious positions on the value of pluralism in economic theory and philosophy. The remaining chapters explore the meaning and consequences of pluralism in economic education, institutions, and policies. This volume provides a unique "second generation" discussion of pluralism in economics. Its twenty original essays stake out contentious positions on pluralism in economic theory, philosophy, institutions, and policies, and education, reflecting multiple generations and traditions of thought. It is a volume certain to spur wider conversation about the scope and value of economic pluralism for the 21st century. This volume would be of most interest as a supplementary text for graduate or undergraduate courses that include units on heterodox economics or economic philosophy.
