Research in Communication Sciences and Disorders: Methods for Systematic Inquiry, Fourth Edition is a comprehensive yet comprehensible text meant for instructors and students of research methods in the field of communication sciences and disorders. This forward-thinking book reflects the movement toward evidence-based practice in speech-language pathology and audiology. The authors

ensure that the concepts associated with evidence-based practice are integrated throughout the chapters. Rather than treating empirical research and searching for clinical evidence as separate topics, this text presents both as different applications of a process of scientific inquiry. The order of the chapters reflects the steps a researcher or clinician might complete when conducting an investigation. Also included are features that help students be more active in learning the material. Each chapter has a set of review questions or case scenarios that can be used as homework, as probe questions in class, or as a basis for group activities. It serves as a surrogate mentor by providing advice and guidance on best practices that set the professional standards for academic research management. Clinical Analytics and Data Management for the DNP, Second Edition Springer Publishing Company The key to marketing is understanding and satisfying consumer needs, thus a knowledge of consumer behavior is essential to any organization dealing with customers, users, or clients. This book promises to be a contemporary classic. It brings together an international set of scholars, many of whom are "household names", to examine the diverse approaches to consumer behavior topics. The editors employ a micro to macro structure, dividing each topic into three parts: one reflecting foundational work, one focused on emerging trends, and one covering practical applications. Each part examines the relationship between consumer behaviour and motivation, including well-being,

gender, social class, and more, and concludes with practitioner perspectives on the challenges and opportunities that come with understanding customers. Readers will gain insight into how drives that are constantly in flux relate to other aspects of human cognition and behavior, allowing them to reach customers successfully, and to meet their needs. With contributions from leading scholars, including Sidney Levy and Jagdish Sheth, this volume sets the standard as the most comprehensive, cutting-edge resource on the subject of consumer behavior. Students of consumer behaviour and marketing will find this a useful exploration of a fast-moving field, fundamental to the welfare of companies, government, non-profits, and consumers. It will also benefit new and established academic researchers as well as practitioners who want to stay on top of current knowledge.

Research Methods in Psychology: Investigating Human Behavior draws on fascinating stories to illustrate the entire research process within a unifying conceptual framework. Bestselling authors Paul G. Nestor and Russell K. Schutt present a clear and comprehensive introduction to the logic and techniques of research methods in psychology by employing a unique combination of two distinct yet complementary pedagogical techniques. First, chapters designed for experiential, hands-on studies put the student in the roles of researcher, participant,

and consumer to bring concepts to life. Second, the findings of cognitive science guide the text in a way that is most conducive to learning. This novel approach serves as an effective way to make the world of psychological research fun and rewarding for students, in addition to allowing them to gain the foundational knowledge they need to design, conduct, and present research. Consuming and Producing Research in Communication Sciences and Disorders John Wiley & Sons This book functions as a guide for leaders in academic and non-academic settings who are interested in developing, managing, or improving new or existing psychiatry residency programs. Technology-Assisted Learning: Honing Students' Affective Outcomes IGI Global The hidden curriculum (HC) in health professional education comprises the organizational and institutional contexts and cultural subtexts that shape how and what students learn outside the formal and intended curriculum. HC includes informal social processes such as role modeling, informal conversations and interactions among faculty and students, and more subterranean forces of organizational

life such as the structure of power and privilege and the architectural layout of work environments. For better and sometimes for worse, HC functions as a powerful vehicle for learning and requires serious attention from health professions educators. This volume, of interest to medical and health professionals, educators, and students, brings together twenty-two new essays by experts in various aspects of HC. An introduction and conclusion by the editors contextualizes the essays in the broader history and literature of the field. The DNP Project Workbook Plural Publishing In this exceptional new second edition, the author has retained much of her earlier experiences when emigrating to the United States but adds depth and detail to the life events that have currently influenced her social values, attitudes, and behaviors. This is a supplementary textbook with the fundamental purpose of facilitating students in

associating the understandings in their personal daily lives with larger social forces. The main discussion focuses on cross-cultural experiences and society with the understanding that time, society, and culture will always influence everyday lives. The following topics are featured: sociological theories and how different political and economic systems influence ways of thinking, everyday life, and social interaction with others; the importance of doing research projects, collecting data, and how to avoid common mistakes; the comparison between Chinese and American cultures, and cultural shock; how immigrants assimilate themselves into American society; deviant behavior that may be considered universal; comparison and evaluation of U.S. and Chinese social stratification; racial group issues; comparison of U.S. and Chinese sex and gender behaviors; different

approaches to the importance of family in cultures; the influence of Confucius versus Christianity; population issues including family planning and abortion; and urbanization and its effect on social change. Replete with numerous illustrations, the author provides a background of Chinese history, culture, and current issues. The book is especially important in the study of history immigration, world cultures, current American immigration, and the socialization and assimilation by the dominant culture in a society. This book serves as a significant resource for the general study of sociology and social sciences at all levels. The Process of Research in Psychology Jones & Bartlett Learning The Campaign for the Civic Mission of Schools (2011) lamented the “lack of high-quality civic education in America’s schools [that] leaves millions of citizens without the wherewithal to make sense of our system of government” (p. 4). Preus et al.

(2016) cited literature to support their observation of “a decline in high-quality civic education and a low rate of civic engagement of young people” (p. 67). Shapiro and Brown (2018) asserted that “civic knowledge and public engagement is at an all-time low” (p. 1). Writing as a college senior, Flaherty (2020) urged educators to “bravely interpret ... national, local, and even school-level incidents as chances for enhanced civic education and to discuss them with students in both formal and casual settings” (p. 6). In this eighth volume in the Current Perspectives on School/University/Community Research series, we feature the work of brave educators who are engaged in schooluniversity-community collaborative educational endeavors. Authors focus on a wide range of projects oriented to civic education writ large—some that have been completed and some that are still in progress—but all authors evince the passion for civic education that underpins engagement in the democratic project.
