“ An engaging, compelling and disturbing confrontation with evil ...a book that will be transformative in its call for individual and

collective moral responsibility." – Michael A. Grodin, M.D., Professor and Director, Project on Medicine and the Holocaust, Elie Wiesel Center for Judaic Studies, Boston University Human Subjects Research after the Holocaust challenges you to confront the misguided medical ethics of the Third Reich personally, and to apply the lessons learned to contemporary human subjects research. While it is comforting to believe that Nazi physicians, nurses, and bioscientists were either incompetent, mad, or few in number, they were, in fact, the best in the world at the time, and the vast majority participated in the government program of “ applied biology. ” They were not coerced to behave as they did—they enthusiastically exploited widely accepted eugenic theories to design horrendous medical experiments, gas chambers and euthanasia programs, which ultimately led to mass murder in the concentration camps. Americans provided financial support for their research, modeled their medical education and research after the Germans, and continued to perform unethical human subjects research even after the Nuremberg Doctors ’ Trial. The German Medical Association apologized in 2012 for the behavior of its physicians during the Third Reich. By examining the medical crimes of human subjects researchers during the Third Reich, you will naturally examine your own behavior and that of your colleagues, and perhaps ask yourself "If the best physicians and bioscientists of the early 20th century could do evil while believing they were doing good, can I be certain that I will never do the same?"

The hidden curriculum (HC) in health professional education comprises the organizational and institutional contexts and cultural subtexts that shape how and what students learn outside the formal and intended curriculum. HC includes informal social processes such as role modeling, informal conversations and interactions among faculty and students, and more subterranean forces of organizational life such as the structure of power and privilege and the architectural layout of work environments. For better and sometimes for worse, HC functions as a powerful vehicle for learning and requires serious attention from health professions educators.

This volume, of interest to medical and health professionals, educators, and students, brings together twenty-two new essays by experts in various aspects of HC. An introduction and conclusion by the editors contextualizes the essays in the broader history and literature of the field.

"Over the last decade, the practices by which scholarly knowledge is produced – both within and across disciplines – have been substantially influenced by the appearance of digital information resources, communication networks and technology enhanced research tools. Viewed from a methodological perspective, the rich ICT-based environment in educational settings influences research methods, ethics and the general conduct of research. Methodological Challenges When Exploring Digital Learning Spaces in Education represents a collection of work of established academics as well as emerging early career researchers all of whom focus on various methodological challenges. From numerous perspectives, the chapters in this volume deal with three particularly demanding challenges for educational research in digital learning contexts. The first challenge concerns how research manages to explore networked learning within a multi-faceted ICT environment. What kind of research designs and forms of data collection are able to grasp this complexity of multiple learning taking place within these contexts? The second challenge deals with how researchers experience the research context and interact with various actors within these settings. How to capture and understand interaction between contexts and across different dimensions of contexts in time and space? And finally, the third challenge is about exploring how children make meaning across physical places and virtual spaces. All together, these challenges are questioning the traditional research methods that we use and are familiar with. This volume is devoted to stimulating debate about the various methodological challenges facing the researcher in the digital sphere of educational research, and furthermore, exploring what kind of new methodological approaches these challenges impose. It is aimed at students, researchers and academics within education and those working with learning across disciplines and contexts interested in methodological issues. Greta Björk Gudmundsdóttir lives and works in Oslo, where she is a Researcher at the Norwegian Centre for ICT in

Education. Kristin Beate Vasbø also works and lives in Oslo, where she is an Associate Professor at the Department of Teacher Education and School Research, University of Oslo. "

The Pacific Symposium on Biocomputing (PSB) 2021 is an international, multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2021 will be held on a virtual platform at psb.stanford.edu/ on January 5-7, 2021. Tutorials and workshops will be offered prior to the start of the conference. PSB 2021 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results

and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods, as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's 'hot topics.' In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field.
