The hidden curriculum (HC) in health professional education comprises the organizational and institutional contexts and cultural subtexts that shape how and what students learn outside the formal and intended curriculum. HC includes informal social processes such as role modeling, informal conversations and interactions among faculty and students, and more subterranean forces of

organizational life such as the structure of power and privilege and the architectural layout of work environments. For better and sometimes for worse, HC functions as a powerful vehicle for learning and requires serious attention from health professions educators. This volume, of interest to medical and health professionals, educators, and students, brings together

---

twenty-two new essays by experts in various aspects of HC. An introduction and conclusion by the editors contextualizes the essays in the broader history and literature of the field.

Methods in Psychology: Investigating Human Behavior draws on fascinating stories to illustrate the entire research process within a unifying conceptual framework. Bestselling authors Paul G. Nestor and Russell K. Schutt present a clear and comprehensive introduction to the logic and techniques of research methods in psychology by employing a unique combination of two distinct yet complementary pedagogical techniques. First, chapters designed for experiential, hands-on studies put the student in the roles of researcher, participant, and consumer to bring concepts to life. Second, the findings of cognitive science guide the text in a way that is most conducive to learning.

This novel approach serves as an effective way to make the world of psychological research fun and rewarding for students, in addition to allowing them to gain the foundational knowledge they need to design, conduct, and present research.

The Campaign for the Civic Mission of Schools (2011) lamented the “ lack of high-quality civic education in America ’ s schools [that] leaves millions of citizens without the wherewithal to make sense of our system of government ” (p. 4). Preus et al. (2016) cited literature to support their observation of “ a decline in high-quality civic education and a low rate of civic engagement of young people ” (p. 67). Shapiro and Brown (2018) asserted that “ civic knowledge and public engagement is at an all-time low ” (p. 1). Writing as a college senior, Flaherty (2020) urged educators to “ bravely interpret ... national, local, and even school-level incidents as chances for enhanced civic education and to discuss them with students in both formal and casual settings ” (p. 6). In this eighth volume in the Current Perspectives on School/University/Community Research series, we feature the work of brave educators who are engaged in schooluniversity-community collaborative educational endeavors. Authors focus on a wide range of projects oriented to civic education writ

large—some that have been completed and some that are still in progress—but all authors evince the passion for civic education that underpins engagement in the democratic project.

**The Pacific Symposium on Biocomputing (PSB) 2021** is an international, multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2021 will be held on a virtual platform at

---

psb.stanford.edu/ on January 5-7, 2021.

Tutorials and workshops will be offered prior to the start of the conference. PSB 2021 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods, as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's 'hot topics.' In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field.

develops a blueprint for building a career in clinical research. Future medical practice depends on the quality of the clinical trials to which drugs, devices, and treatment procedures are subjected today. However, clinical trials are not easy to do, and many physicians and health care providers who attempt clinical research struggle in this endeavor, primarily because of lack of instruction. Clinical Research aims to fill the gap between training and research through case studies of a long-time clinical researcher's rich and varied experiences.

The Process of Research in Psychology employs the pedagogical approach of spaced repetition to present a student-friendly introduction to conducting research in psychology. Drawing on more than 17 years of teaching experience, best-selling author Dawn M. McBride covers topics with step-by-step explanations to help students understand the full process of designing, conducting, and presenting a research study. Early chapters introduce important concepts for developing research ideas, subject sampling, ethics, and data collection; more detailed coverage of these topics is included in "More

About" chapters to provide instructors with flexibility in their teaching. Concepts and skills relevant to more than one stage of the research process are covered in multiple contexts, providing repeated exposure to the topics students often struggle with but that are the most important in gaining research skills.
