Conducting Research with Human Participants: An IRB Guide for Students and Faculty by Nathan Durdella is the only guidebook students and faculty will need to navigate the IRB process and secure swift approval of research protocols. This book serves as an advisor to walk researchers through all

the details of drafting, submission, and revision of materials for Institutional Review Boards so they can complete their research projects or dissertations faster. This text walks readers through the history of Institutional Review Boards, the contemporary context of ethical research, strategies to effectively draft, submit, and revise an IRB protocol, and guidance on working with an approved protocol in the field. The latest updates to the Common Rule and other regulatory frameworks, including special protections for working with vulnerable groups, are covered throughout the text. Not every research project goes according to plan, so adverse events and reporting receive special coverage. A final chapter on

ethical research practices beyond IRB compliance encourages researchers to think through how to exit the field of research and ensure their research benefits the individuals, families, and communities in which they work. Take the guesswork out of the IRB process from start to finish with this handy guide.

Research Methods in Psychology: Investigating Human Behavior draws on fascinating stories to illustrate the entire research process within a unifying conceptual framework.

Bestselling authors Paul G. Nestor and Russell K. Schutt present a clear and comprehensive introduction to the logic and techniques of research methods in psychology by employing a unique combination of two distinct yet complementary pedagogical techniques. First, chapters designed for experiential, hands-on studies put the student in the roles of researcher, participant, and consumer to bring

concepts to life. Second, the findings of cognitive science guide the text in a way that is most conducive to learning. This novel approach serves as an effective way to make the world of psychological research fun and rewarding for students, in addition to allowing them to gain the foundational knowledge they need to design, conduct, and present research.

Academic Achievement of First-Generation Mexican American Males in a Community College
SAGE Publications

The purpose of this study was to examine the complexities of successful attainment and achievement of 10 Mexican American males in a rural Southwest community college. This study strives to offer insights concerning the questions: (a) what behavioral patterns of current family, peers, and conditions in school have influenced the educational decisions of these Mexican American males? and (b) what social conditions motivate these Mexican American males to seek and achieve higher education despite adversity? This qualitative research was also aimed at establishing and understanding how a selected number of Mexican American males have achieved academic success. The researcher chose 10 men with either an associate of arts or an associate of science degrees for an in-depth interview and used a semi-structured interview guide in an effort to prompt oral discourse. The interviewer posed questions

concerning academic conditions, family impact, college environment, and financial issues. The responses to the questions led to similar themes involved in these students' course completion and graduation. The researcher used a theoretical framework using Bandura's Social Learning Theory (1977) in which he suggests that not only environmental factors, but motivational factors along with self-regulatory mechanisms affect an individual's behavior. This research illustrated the conditions that facilitated reaching the participant's educational goal and mission, which was to complete a two-year degree at the community college. The inquiry examined the behavioral patterns that have been an influence on the educational decisions of these Mexican American males, and what social conditions have motivated them to seek and achieve higher education despite adversity.

Hemodynamics and Cardiology: Neonatology Questions and Controversies Springer Nature
Administrators of museums and other informal-learning centers often need to demonstrate, in some tangible way, the effectiveness of their

institutions as teaching tools. Practical Evaluation Guide discusses specific methods for analyzing audience learning and behavior in museums, zoos, botanic gardens, nature centers, camps, and youth programs. Evaluation is essential because it allows you to answer critical questions like: How can one measure the impacts of educational experiences in a museum, zoo, or aquarium? Are digital technologies more effective than traditional exhibits for enhancing visitor interest and understanding? How does one measure learning in these informal environments where visitors themselves decide what they will experience? Since we know many visitors come to informal institutions for social interaction and play, how does one access these social impacts? The Practical Evaluation Guide is an all-in-one resource to guide professionals working in museums and other informal educational institutions. This new edition includes updates throughout and features a brand-new chapter on evaluating digital interactive exhibits. The section on observational tools includes a new section on using video recordings and the section on interviews includes recent studies from countries outside the U.S. Practical Evaluation Guide serves as a basic, easy-to-follow guide for museum professionals and students who want to understand the effects of such public institutions on the people who visit them.

This book explores why veteran teachers choose to remain in the classroom, making teaching their life's career. The authors felt compelled to interview veteran teachers to learn about their experiences, how they make meaning of their classrooms and schools, and in particular what can be known about the adversities they face and their resilience. Factors (individual and contextual) are uncovered that influence veteran teacher's resiliency and adaptation from veteran teachers' perspectives and the literature. Induction programs, professional development, and mentoring are also examined for their importance to the interviews and education. Features of this book include: Focuses on veteran teacher resilience and why veteran teachers choose to remain in the classroom and teaching profession Uses an interview method involving veteran teachers that illuminates issues of resiliency and retention from their perspective Highlights 15 narrative accounts of veteran teachers tailored to their perceptions, experiences, and strategies for navigating barriers and overcoming challenge Combines conceptual frameworks, research results, interventions, and strategies Connects implications of the study and suggestions for future research to practice and policy This book is for researchers interested in teacher resilience,

particularly veteran teacher resilience and the study and development of it, as well as practitioners drawn to the same topic, with applicability to their fields. Anyone interested in resilience, particularly within demanding professional contexts and stressful situations, should find value. "The focus on teacher resilience is original and it is an important aspect of why teachers might choose to stay in the profession. Teacher resilience is understudied and should provide useful knowledge to policymakers and education leaders on how to improve working conditions and increase efficacy. So much ink is spilled extolling why teachers exit the profession--there is a dearth of research on why they stay, which in my opinion is even more important than why they leave. This book makes an important contribution to the literature and will hopefully inform policy making and inspire others to conduct research on the subject." Christopher H. Tienken, Associate Professor, Dept. of Education Leadership Management and Policy, Seton Hall University, South Orange, NJ, USA "The topic is original. It seems there is much literature on new teachers and why they leave, but little on veteran teachers and why they stay. The topic and the reporting of the findings with suggestions for practices to be implemented in university programs as well as in K-12 schools is very useful. The format this book

follows is actually a strong one for other researchers and students in doctoral programs." Sandra Harris, Professor Emerita, Educational Leadership, Lamar University, Beaumont, Texas, USA

Marital concord between couples from different racial and ethnic backgrounds is an issue that needs serious attention to bridge the vast chasms. America welcomes people from all over the world. People of all religions and ethnic backgrounds come here to study and migrants arrive here to work. Interracial marriages are common but the radically different background of each couple can create discords and prove to be bumps on the highway of conjugal life. This can have serious repercussions on the offspring and on the couple and their lives as well. This book seeks to investigate how cultural realities can be addressed within intercultural premarital couples counseling. Using a cultural focus approach couples' stories around their particular culture and relationship were analyzed. Themes related to relationship, family and social ties, and parenting bi-cultural and bi-racial children were examined. Issues of religious and social influence, money, race, ethnicity, extended family, immigration, and biases in family of origin, are explored as are roles and responsibilities, communication, respect, trust, and gender-stereotyping. The book adopts a pastoral theological approach in working towards a deeper understanding of premarital relationships of partners who represent cultural difference and diversity. In conclusion recommendations to therapists and care givers for counseling intercultural couples are made.
