Although inner-city nontraditional students can have the necessary ability, Miller contends that they

often lack the educational background to handle college-level mathematics courses. In *Teaching College Algebra: Reversing the Effects of Social Promotion*, Miller provides a user-friendly guide for teaching algebra, trigonometry, finite mathematics, and statistics to students who are the victims of school social promotion practices. *Teaching College Algebra* discusses how to present material to students who are inadequately prepared, ways to build self-confidence, and advice for developing a teaching style appropriate to the task of preparing nontraditional students for college-level mathematics. In addition to including a complete discussion of the basic principles of algebra, this book provides helpful chapter summaries, course outlines, word problems, and timetables. It will be of great assistance to teachers, college professors, and parents.
