Explorations in College Algebra,  
Instructor's Solutions Manual Addison  
Wesley Longman

This Solutions Manual contains solutions to all typical problems in the textbook, College Algebra: Lecture Notes, by the author (ISBN 9781545126479). This step-by-step solution guide is a great complement to the textbook and allows the student to truly master problem-solving techniques in College Algebra. The textbook itself is a set of lectures and practical exercises in College Algebra written for university students. It comes with a computer code to access online lectures (recorded in an actual classroom setting), tutoring sessions and quizzes, which together constitute an effective tool for the fast and independent mastery of College Algebra by the motivated student. College Algebra is a gateway course, a requirement for all college students. Unfortunately, many students encounter significant difficulties in mastering the course and are often forced to repeat the course numerous times, a discouraging process which is expensive and delays degree completion. This textbook addresses these difficulties by streamlining the course to emphasize the understanding of basic concepts. The textbook is based on the learning principle of moving "from elementary to complex." Each topic begins with a straight-to-the-point lecture which introduces the main definitions, then an accompanying set of carefully selected problems develops an understanding of the material and the ability to use it in the following topics.

Solutions Cengage Learning College Algebra actually makes sense and is something that you can figure out and understand why it works. This text focuses on a conceptual understanding of the big ideas in algebraic thinking, engaging the student in authentic problem solving and exploring the logical reasoning that underlies the various techniques and procedures in college algebra. An Inquiry-based Approach. Each section starts with a Class Activity to engage students in actually doing mathematics. Doing math is not just calculating or following a procedure. Doing math is figuring things out: investigating, making and testing conjectures, making arguments, and communicating your reasoning to others. The class activities are designed to highlight big algebraic ideas and spark a discussion of algebraic habits of mind, as well as students' alternate conceptions that lead to common algebra mistakes. Students are asked to analyze solutions, explore representations, explain why valid methods for simplifying expressions or solving equations work, and explain why invalid methods do not work. This book is intended to be read. Often math textbooks do not end up being read, but instead are used merely as a reference for their step-by-step procedures. Each section of this text has a "Read and Study" section that discusses the mathematics raised by the Class Activity and focuses on the mathematical reasoning and proof needed to nurture longer-lasting understanding of the content. This is meant to be read slowly and carefully, with pencil in hand. We pose questions

that you should think about and answer before reading on. When we do work out an example, we do so to discuss the big ideas and illustrate our reasoning, not with the intention of providing you with a model to copy.

Exercises vs. Problems. In the homework, we distinguish between "exercises" and "problems." Exercises are more routine, intended to give you more practice thinking about the big concepts. In contrast, the "problems" are intended to be problematic, to take time to explore, develop and make connections, and often to extend your reasoning to develop new ideas. We do not include "answers" to these homework exercises and problems. Why struggle and persevere to figure something out and understand it when you can just look it up? Mathematics is not about getting the right answer; it's about figuring things out. It's about logical reasoning and being able to justify that what you claim is true. This doesn't mean that you are on your own. We will do our best in the Read and Study sections to discuss the big ideas, offer explanations, and show you some good examples of problem solving and making mathematical arguments. This text addresses the topics of a standard course in College Algebra, with the following sections: 1. Features of Algebraic Thinking 2. Algebraic Symbols 3. Sequences of Operations 4. Properties of Operations 5. The Distributive Law 6. Additive and Multiplicative Inverses 7. Using Inverses 8. Exponents 9. Roots of Numbers 10. Irrational and Imaginary Numbers 11. Testing and Justifying Simplifications 12. Types of Equations 13. Properties of Equality and Solving Equations 14. Techniques for Solving

being taught. New to these editions, Technology Connections illustrate how concepts that were previously explained in an algebraic context may also be solved using a graphing calculator. Students are always shown the underlying algebraic methods first so that they do not become calculator-dependent. In addition, each text in the series contains an abundance of exercises - including numerous calculator-based and reasoning and writing exercises - and a wide variety of real-world applications illustrating how math is useful.

Explorations in College Algebra, 3/e and its accompanying ancillaries are designed to make algebra interesting and relevant to the student. The text adopts a problem-solving approach that motivates students to grasp abstract ideas by solving real-world problems. The problems lie on a continuum from basic algebraic drills to open-ended, non-routine questions. The focus is shifted from learning a set of discrete mathematical rules to exploring how algebra is used in the social, physical, and life sciences. The goal of Explorations in College Algebra, 3/e is to prepare students for future advanced

mathematics or other quantitatively based courses, while encouraging them to appreciate and use the power of algebra in answering questions about the world around us. Explorations in College Algebra was developed by the College Algebra Consortium based at the University of Massachusetts, Boston and funded by a grant from the National Science Foundation. The materials were developed in the spirit of the reform movement and reflect the guidelines issued by the various professional mathematics societies (including AMATYC, MAA, and NCTM).
