Concept-Based Video Retrieval Springer
Many of us, especially since 9/11, have become personally concerned about issues of security, and this is no surprise. Security is near the top of government and corporate agendas around the globe. Security-related stories appear on the front page everyday. How well though, do any of us truly understand what achieving real security involves? In Beyond Fear, Bruce Schneier invites us to take a critical look at not just the threats to

our security, but the ways in which we're encouraged to think about security by law enforcement agencies, businesses of all shapes and sizes, and our national governments and militaries. Schneier believes we all can and should be better security consumers, and that the trade-offs we make in the name of security - in terms of cash outlays, taxes, inconvenience, and diminished freedoms - should be part of an ongoing negotiation in our personal, professional, and civic lives, and the subject of an open and informed national discussion. With a well-deserved reputation for original and sometimes iconoclastic thought, Schneier has a lot to say that is provocative, counter-intuitive, and just plain good sense. He explains in detail, for example, why we need to design security systems that don't just work well, but fail well, and why secrecy on the part of government often undermines security. He also believes, for instance, that national ID cards are an exceptionally bad idea: technically unsound, and even destructive of security. And, contrary to a lot of current nay-sayers, he thinks online shopping is fundamentally safe, and that many of the new airline security measure (though by no means all) are actually quite effective. A skeptic of much that's promised by highly touted technologies like biometrics, Schneier is also a refreshingly positive, problem-solving force in the often self-dramatizing and fear-mongering world of security pundits. Schneier helps the reader to understand the issues at stake, and how to best come to one's own conclusions, including the vast infrastructure we already have in place, and the vaster systems--some useful, others useless or worse--that we're being asked to submit to and pay for. Bruce Schneier is the author of seven books, including Applied Cryptography (which Wired called "the one book the National Security Agency wanted never to be published") and Secrets and Lies (described in Fortune as "startlingly lively... [a] jewel box of little surprises you can actually use."). He is also Founder and Chief Technology Officer of Counterpane Internet Security, Inc., and publishes Crypto-Gram, one of the most widely read newsletters in the field of online security.

Stranger Citizens examines how foreign migrants who resided in the United States gave shape to citizenship in the decades after American independence in 1783. During this formative time, lawmakers attempted to shape citizenship and the place of immigrants in the new nation, while granting the national government new powers such as

deportation. John McNelis O'Keefe argues that despite the challenges of public and official hostility that they faced in the late 1700s and early 1800s, migrant groups worked through lobbying, engagement with government officials, and public protest to create forms of citizenship that worked for them. This push was made not only by white men immigrating from Europe; immigrants of color were able to secure footholds of rights and citizenship, while migrant women asserted legal independence, challenging traditional notions of women's subordination. Stranger Citizens emphasizes the making of citizenship from the perspectives of migrants themselves, and demonstrates the rich varieties and understandings of citizenship and personhood exercised by foreign migrants and refugees. O'Keefe boldly reverses the top-down model wherein citizenship was constructed only by political leaders and the courts. Thanks to generous funding from the Sustainable History Monograph Pilot and the Mellon Foundation the ebook editions of this book are available as Open Access (OA) volumes from Cornell Open (cornellpress.cornell.edu/cornell-open) and other Open Access repositories.

This revealing study considers the

remarkable alliance between chemistry and art from the late eighteenth century to the period immediately following the Second World War. *Synthetic Worlds* offers fascinating new insights into the place of the material object and the significance of the natural, the organic, and the inorganic in Western aesthetics. Esther Leslie considers how radical innovations in chemistry confounded earlier alchemical and Romantic philosophies of science and nature while profoundly influencing the theories that developed in their wake. She also explores how advances in chemical engineering provided visual artists with new colors, surfaces, coatings, and textures, thus dramatically recasting the way painters approached their work. Ranging from Goethe to Hegel, Blake to the Bauhaus, *Synthetic Worlds* ultimately considers the astonishing affinities between chemistry and aesthetics more generally. As in science, progress in the arts is always assured, because the impulse to discover is as immutable and timeless as the drive to create.

In this paper, we review 300 references on video retrieval, indicating when text-only solutions are unsatisfactory and showing the promising alternatives which are in majority concept-based. Therefore, central to our discussion is the notion of a semantic concept: an objective linguistic description of an observable entity. Specifically, we present our view on how its automated detection, selection under uncertainty, and interactive usage might solve the major scientific problem for video retrieval: the semantic gap. To bridge

the gap, we lay down the anatomy of a concept-based video search engine. We present a component-wise decomposition of such an interdisciplinary multimedia system, covering influences from information retrieval, computer vision, machine learning, and human-computer interaction. For each of the components we review state-of-the-art solutions in the literature, each having different characteristics and merits. Because of these differences, we cannot understand the progress in video retrieval without serious evaluation efforts such as carried out in the NIST TRECVID benchmark. We discuss its data, tasks, results, and the many derived community initiatives in creating annotations and baselines for repeatable experiments. We conclude with our perspective on future challenges and opportunities.

This book addresses the origins, determinants and magnitude of the global problem of sedentary behaviour, along with concise yet in-depth solutions for tackling it. As a consequence of major technological advances in modern society, many people find themselves in environments characterized by prolonged sedentary behaviour. Building on the contributions of leading experts in the field, the new edition of this book presents updated knowledge about sedentary behaviour, its medical and public health significance, its correlates and determinants, measurement techniques, and recommendations for addressing this behaviour at the individual, community, environmental, and policy level. The book encompasses current research linking the COVID-19 pandemic to increased levels of sedentary behavior, and it covers global and planetary health aspects of sedentary behavior, highlighting sustainable

development goals such as health and well-being for all. Applying a cross-disciplinary methodology, the book avoids considering physical activity and sedentary behavior as a single continuum, which potentially hampers progress in confronting widespread levels of sedentariness. Rather, the book helps readers better understand how sedentary and physically active behavior co-occur and how the two behaviours have distinct contributing factors. Building on the contributions of distinguished international experts in the field, this thorough resource is a valuable asset and challenges professionals, researchers, students, and practitioners alike to adopt new strategies and expand their reach.

Introduction to Autonomous Mobile Robots, second edition

When a child has a health problem, parents want answers. But when a child has cerebral palsy, the answers don't come quickly. A diagnosis of this complex group of chronic conditions affecting movement and coordination is difficult to make and is typically delayed until the child is eighteen months old. Although the condition may be mild or severe, even general predictions about long-term prognosis seldom come before the child's second birthday. Written by a team of experts associated with the Cerebral Palsy Program at the Alfred I. duPont Hospital for Children, this authoritative resource provides parents and families with vital information that can help them cope with uncertainty. Thoroughly updated and revised to incorporate the latest medical advances, the second edition is a comprehensive guide to cerebral palsy. The book is organized into three parts. In the first, the authors describe specific patterns of involvement (hemiplegia, diplegia, quadriplegia), explain the medical and psychosocial implications of these conditions, and tell parents how to be effective advocates for their child. In the second part, the authors provide a wealth of practical advice about caregiving from nutrition to mobility. Part

three features an extensive alphabetically arranged encyclopedia that defines and describes medical terms and diagnoses, medical and surgical procedures, and orthopedic and other assistive devices. Also included are lists of resources and recommended reading.

Childhood Cancer Survivors Univ of California Press

More than 325,000 children, teens, and adults in the United States are survivors of childhood cancer. The surgery, radiation, chemotherapy, and stem cell transplants used to cure children can affect growing bodies and developing minds. If survivors know of these potential problems, they can take steps to identify, cope with, or treat them early if they do develop. The third edition of *Childhood Cancer Survivors* charts the territory for survivors by providing state-of-the-art information about: " Medical late effects from treatment " Emotional aspects of surviving cancer " Schedules for follow-up care " Challenges in the health-care system " Lifestyle choices to maximize health " Discrimination in employment or insurance Woven throughout the text are stories from more than 100 survivors and parents. Authors Keene, Hobbie, and Ruccione are experts in the field of childhood cancer. Keene is the mother of a survivor of childhood leukemia and the author of several books including *Childhood Leukemia*, *Childhood Cancer*, *Educating the Child with Cancer*, and *Chemo, Crazyness & Comfort*. Hobbie is Associate Director of the Cancer Survivorship Program at Children's Hospital of Philadelphia. Ruccione is Co-Director of the HOPE (Hematology-Oncology Psychosocial and Education) Program in the Children's Center for Cancer and Blood Diseases at Children's Hospital Los Angeles.

This open access book investigates the link between income inequality and socio-economic residential segregation in 24 large urban regions in Africa, Asia, Australia, Europe, North America, and South America. It offers a unique global overview of segregation trends based on case studies by local author teams. The book shows important global trends in segregation, and proposes a Global Segregation Thesis. Rising inequalities lead to rising levels of socio-economic segregation almost everywhere in the world. Levels of inequality and segregation are higher in cities in lower income countries, but the growth in inequality and segregation is faster in cities in high-income countries. This is causing convergence of segregation trends.

Professionalisation of the workforce is leading to changing residential patterns. High-income workers are moving to city centres or to attractive coastal areas and gated communities, while poverty is increasingly suburbanising. As a result, the urban geography of inequality changes faster and is more pronounced than changes in segregation levels. Rising levels of inequality and segregation pose huge challenges for the future social sustainability of cities, as cities are no longer places of opportunities for all.

Arthrogryposis Childhood Cancer Guides

The term arthrogryposis describes a range of congenital contractures that lead to childhood deformities. It encompasses a

number of syndromes and sporadic deformities that are rare individually but collectively are not uncommon. Yet, the existing medical literature on arthrogryposis is sparse and often confusing. The aim of this book is to provide individuals affected with arthrogryposis, their families, and health care professionals with a helpful guide to better understand the condition and its therapy. With this goal in mind, the editors have taken great care to ensure that the presentation of complex clinical information is at once scientifically accurate, patient oriented, and accessible to readers without a medical background. The book is authored primarily by members of the medical staff of the Arthrogryposis Clinic at Children's Hospital and Medical Center in Seattle, Washington, one of the leading teams in the management of the condition, and will be an invaluable resource for both health care professionals and families of affected individuals.

www.luminosoa.org. Peruvian migrant workers began arriving in South Korea in large numbers in the mid 1990s, eventually becoming one of the largest groups of non-Asians in the country. Migrant Conversions shows how despite facing unstable income and legal exclusion, migrants come to see Korea as an ideal destination. Some even see it as part of their divine destiny. Faced with looming departures, Peruvians develop cosmopolitan plans to transform themselves from economic migrants into pastors, lovers, and leaders. Set against the backdrop of 2008's global financial crisis, Vogel explores the intersections of three types of conversions— money, religious

beliefs and cosmopolitan plans—to argue that conversions are how migrants negotiate the meaning of their lives in a constantly changing transnational context. At the convergence of cosmopolitan projects spearheaded by the state, churches, and other migrants, Peruvians change the value and meaning of their migrations. Yet, in attempting to make themselves at home in the world and give their families more opportunities, they also create potential losses. As Peruvians help carve out social spaces, they create complex and uneven connections between Peru and Korea that challenge a global hierarchy of nations and migrants. Exploring how migrants, churches and nations change through processes of conversion reveals how globalization continues to impact people's lives and ideas about their futures and pasts long after they have stopped moving, or that particular global moment has come to an end.
