This IBM® Redbooks® publication discusses in detail the facilities of DB2® for z/OS®, which allow complete monitoring of a DB2 environment. It focuses on the use of the DB2 instrumentation facility component (IFC) to provide monitoring of DB2 data and events and includes suggestions for related tuning. We discuss the collection of statistics for the verification of performance of the various components of the DB2 system and accounting for tracking the behavior of the applications. Digital technologies have fundamentally altered the nature and function of media in our society, reinventing age-old practices of public communication and at times circumventing traditional media and challenging its privileged role as gatekeepers of news and entertainment. Some critics believe these technologies keep the public involved in an informed discourse on matters of public importance, but it isn't clear this is happening on a large scale. Propaganda disguised as news is

flourishing, and though interaction with the digital domain teaches children valuable skills, it can also expose them to grave risks. John V. Pavlik critically examines our current digital innovations blogs, podcasting, peer-to-peer file sharing, on-demand entertainment, and the digitization of television, radio, and satellites and their positive and negative implications. He focuses on present developments, but he also peers into the future, foreseeing a media landscape dominated by a highly fragmented, though active audience, intense media competition, and scarce advertising dollars. By embracing new technologies, however, Pavlik shows how professional journalism and media can hold on to their role as a vital information lifeline and continue to operate as the tool of a successful democracy.

Reviews(starred) Aaron is not a man on a hero's journey. In the question of fight or flight, he'll choose flight every time. So when a car accident leaves him suddenly asymmetrical, his left arm amputated, looking on the bright side just isn't something he's equipped to do. Forced to return to his boyhood home to recuperate, Aaron is confronted with an aging father (a former Olympic biathlete turned hoarder), a mother whose chosen to live in a yurt with a fireman twelve years her junior, and a well-meaning sister whose insufferable husband proves love isn't just blind, but also painfully stupid. As Aaron tries to make the world around him disappear in a haze of Vicodin and medical marijuana, the only true joy in his life comes from daily ninety-second radio spots of fun science facts: the speed of falling raindrops, batteries made out of starfish, and sexual responses triggered by ringtones - all told in the lush, disembodied voice of commentator Sunny Lee, with whom he falls helplessly, ridiculously, in love. Aaron's obsession with Sunny only hastens his downward spiral, like

pouring accelerant on a fire. Pressured to do something - anything - to move his life forward, he takes the only job he can get. As a "fish counter" at the nearby dam, he concludes that an act of violent sacrifice to liberate the river might be his best, final option.
